Study & Evaluation Scheme Study Summary

Faculty of Graduate Studies
Quantum School of Graduate Studies
Department OF SCIENCES
Bachelor of Science(Hons) (Specialization in
Physics/Chemistry/Maths)
3 Years
English

Evaluation Scheme

Evaluation Scheme										
Type of Papers	Internal	Total								
	Evaluation	Evaluation (%)	(%)							
	(%)									
Theory	40	60	100							
Practical/Dissertations/Project	40	60	100							
Report/ Viva-Voce										
Internal Evaluati	on Components	(Theory Papers)								
Mid Semester Examination		60Marks								
Assignment–I		30Marks								
Assignment-II		30Marks								
Attendance		30Marks								
Internal Evalua	tion Componen	ts (Practical Papers)								
Quiz One		30Marks								
Quiz Two		30Marks								
Quiz Three		30Marks								
Lab Records/Mini Project		30Marks								
Attendance		30Marks								
End Semester	Evaluation (Pro	actical Papers)								
ESE Quiz		40Marks								
ESE Practical Examination		20Marks								
(write-up)		ZUIVIAIKS								
Viva-Voce		20Marks								
Practical performance		20Marks								

Structure of Question Paper (ESE Theory Paper)

The question paper will consist of 5 questions, one from each unit. Student has to Attempt all questions. All questions carry 20 marks each. Parts a) and b) of question Q1 to Q5 will be compulsory and each part carries 2 marks. Parts c), d) and e) of Q1 to Q5 Carry 8 marks each and the student may attempt any 2 parts.

ImportantNote:

- 1. The purpose of examination should be to assess the Course Outcomes (CO) that will ultimately lead to attainment of Programme Outcomes (POs). The following aspects of learning planned for specific course: Remember, Understand, Apply, Analyze, Evaluate & Create (reference to Bloom's Taxonomy). The standard of question paper will be based on mapped BL level complexity of the unit of the syllabus, which is the basis of CO attainment model adopted in the university.
- 2. Thereshallbe continuous evaluation of the studentand therewill be aprovision of real time reporting on QUMS. All the assignments will evaluated through module available on ERP for time and access management of the class.

Program Structure—Bachelor of Science (Hons) (Specialization in Physics/Chemistry/Maths)

Introduction

The Bachelor of Science (Hons) courses offered in the undergraduate program at Quantum University, Roorkeeformpartof a comprehensive program that will enable the students to understand the basic laws of nature and develop necessary skills to apply them to any desired area or discipline. The program is planned as a student centric collaborative learning. Students get trained for a career in basic sciences or any related applied science or technology.

TheBachelor ofScience(Hons) subjects are designed insuch a way that students grasp all the knowledge related to science. Towards enhancing higher study, employability and entrepreneurial ability of the graduates the Quantum University increase the practical content in the courses wherever necessary. The total number of credit hours in 6 semesters will range from 139 to 148 for all the BSc(H) programs.

In order to harness regional specialties and to meet region-specific needs the Quantum University modify the content of syllabus as per the regional demands and needs.

GeneralPattern

The courses offered during the first year (Semesters I to II) are meant as basic and introductory courses in Chemistry, Mathematics, Physics and Skill Enhancing. These are common and mandatory for all students. They include six theory courses and four lab courses from each stream. These courses are inculcated to give a flavor of the various subjects and analyses to prepare the students for advanced courses inlater yearsof study. Inaddition, therewillbeInterdisciplinaryCourses for computationalskills communication skills and environmental studies.

In the second and third years (Semesters III-VI), students have the freedom to choose advanced courses (particularly in final year) based on their interest and inclination. The courses offered in the first years would help them to make an informed judgment to determine their real interest and their aptitude for a given subject.

SpecializationinPhysics

The courses offered specialization in Physics at Quantum University, Roorkee form part of a comprehensive programate the level of a Bachelor's degree. The specialization in Physics programaims to enable students to understand the basic laws of nature and develop the necessary skills and tools to apply this understanding to other areas and disciplines. Here students are prepared for careers in basic physics as well as in related applied sciences or technology.

The list of courses offered from each discipline contained contents of syllabus (unit wise) with lists of reference books is given below. Other relevant details like objectives, course outcome, topic in detail, patternof assessment, additional books for studyandreference etc. will be prepared in the form of course file by the faculty and communicated to the students well in advance before start of each semester.

The courses of fered in specialization in Physics program are structured in following levels-

CoursesinI-II Semesters:

The first level spans courses offered during the first two semesters of the Bachelor of Science(Hons) Program. Thesecourses are commonand mandatory for all students. Based on their interests, the students specialize after completing the fourth semester. For this reason, the first level courses are designed to cover the basic concepts in physics along with some skill Enhancement courses in a very comprehensive manner, since they could be the only physics courses taken by students specializing in other disciplines.

These courses are meant to give the various approaches and analyses in Physics as well as top repare them for advanced courses in later years of study. Physics courses in the first four semesters offer all students an exposure to both the rigour and breadth of physics, concentrating mainly on mechanics, waves and optics, electricity and magnetism, and quantum physics. There are Laboratory Courses that expose them to key experiments and teach them skills in handling basic equipment. In addition, there are Interdisciplinary Courses offered during this period: Mathematical Methods that provides the basic mathematical tools needed for a program in science, and Thermodynamics that provides an introduction to the concepts needed for the further study of physics and chemistry.

CoursesinSemestersV-VI

The courses at the second level of the program are designed for students who have chosen to specialize primarily in physics. These are in-depth courses with a strong emphasis on developing problem-solving skills. The basic requirements for graduation during semesters V-VI, consist of 4 courses of 4 creditseach. Thesearecorecourses meant for detailedandin-depthstudycoveringall thebasic areas of Physics. A student planning a career in Physics is expected to take all of them. These include Mathematical Physics-II, Advanced Electromagnetic Theory, Solid State Physics with open elective subjects Digital Systems and Its Applications, Applications of Quantum Mechanics, Astronomy and Astrophysics, Nuclear and Particle Physics, Mathematical Physics-III, Statistical Mechanics, Analog Systems and its Applications, ClassicalDynamics, Physics of Earth, AppliedOptics. Four Laboratorycourses areoffered, two in each semester, which will train students in advanced-level experiments and the use of modern equipment. Thecourses at this levelaredesignedtotrainstudents to enter intoa career as experimentalor theoretical physicists. For this purpose, students are encouraged to follow their own inclinations and can take any combination of basic theoretical courses including current research topics, as well as advanced laboratory courses, along with courses like electronics and experimental methods.

InterdisciplinaryCourses

The pattern of course work followed at Quantum University, Roorkee permits students specializing in other disciplines or areas, also to take courses from Physics. The various courses like; Mathematical Methods, Nonlinear Dynamics, Fluid Dynamics, Nanoscale Physics and Material Science are offeredsuch that students interested in other disciplines also benefit fromthem. Similarly, a student interested ina career in Physics and interdisciplinary areas related to Physics, can take courses from other disciplines. Some such courses are Neurobiology, Genetics, Biophysics etc from Biology; Statistical Thermodynamics, Symmetry and Group Theory, Quantum Chemistry etc from Chemistry; and Differential Geometry, Statistics, Complex Analysis etc fromMathematics. During Semesters III and IV, students have to take at least one course from another discipline.

SpecializationinChemistry

The courses offered in specialization in Chemistry at Quantum University, Roorkee form part of a comprehensive program at the level of a Bachelor's degree. The specialization in Chemistry program aims to enable students to understand the basic laws of nature and develop the necessary skills and tools to apply this understandingtoother areasanddisciplines. Here students are prepared for careers in basic physics as well as in related applied sciences or technology.

Thelist ofcourses offered from each disciplinecontained contents of syllabus (unit wise) with listsofreference books is given below. Other relevant details like objectives, course outcome, topic in detail, pattern of assessment, additional books for study and reference etc. will be prepared in the form of course file by the faculty and communicated to the students well in advance before start of each semester.

The courses of fered in specialization in Chemistry program are structured in following levels-

CoursesinI-IISemesters:

The first level spans courses offered during the first two semesters of the Bachelor of Science(Hons) Program. These courses are common and mandatory for all students. Based on their interests, the students specialize after completing the fourth semester. For this reason, the first level courses are designed to cover the basic concepts in physics along with some skill Enhancement courses in a very comprehensive manner, since they could be the only physics courses taken by students specializing in other disciplines. These courses are meant to give the various approaches and analyses in Chemistry as well as to prepare them for advanced courses in later years of study. Chemistry courses in the first four semesters offer all students an exposure to both the rigour and breadth of Chemistry, concentrating mainly on Atomic molecules Solid state chemistry, Thermodynamics and its applications, and s &p block elements. There are Laboratory Courses that expose them to key experiments and teach them skills in handling basic equipment. In addition, there are Interdisciplinary Courses offered during this period: Mathematical Methods that provides the basic mathematical tools needed for a program in science, and Thermodynamics that provides an introduction to the concepts needed for the further study of physics and chemistry.

CoursesinSemesters V-VI

The courses at the second level of the program are designed for students who have chosen to specializeprimarilyinchemistry. These are in-depth courses with a strong emphasis on developing problem-solving skills. The basic requirements for graduation during semesters V-VI, consist of 4 courses of 4 credits each. These are core courses meant for detailed and in-depth study covering all the basic areas of Physics. A student planning a careerin chemistry is expected to take all of them. These include Organometallic chemistry, Chemical Kinetics, Instrumental methods of chemical analysis with open elective subjects Green Chemistry, Biochemistry, Research Methodology for chemistry, Chemistry of Molecules, Thermodynamics and its applications. Four Laboratory courses are offered, two in each semester, which will train students in advanced-level experiments and the use of modern equipment. The courses at this level are designed to train students to enter into a career as experimental or theoretical Chemistry. For this purpose, students are encouraged to follow their own inclinations and can take any combination of basic theoretical courses including current research topics, as well as advanced laboratory courses, along with courses like electronics and experimental methods.

InterdisciplinaryCourses

The pattern of course work followed at Quantum University, Roorkee permits students specializing in other disciplines or areas, also to take courses from Chemistry. The various courses like; Instrumental Methods, Nonlinear Green Chemistry, Environmental chemistry, molecules of Life and Material Science areoffered such that students interested in other disciplines also benefit from them. Similarly, a student interested in a career in Chemistryand interdisciplinaryareas related to Chemistry, can take courses from other disciplines. Some such courses are Biochemistry, Genetics, etc from Biology; Statistical Thermodynamics, Symmetry and Group Theory, Quantum Chemistry etc from Chemistry; and Differential Geometry, Statistics, Complex Analysis etc from Mathematics. During Semesters III and IV, students have to take at least one course from another discipline.

SpecializationinMathematics

The courses offered in specialization in Mathematics at Quantum University, Roorkee form part of a comprehensive program at the level of a Bachelor's degree. The specialization in Mathematics program aims to enable students to understand the basic laws of nature and develop the necessary skills and tools to apply this understanding to other areas and disciplines. Here students are prepared for careers in basic physics as well as in related applied sciences or technology.

Thelist ofcourses offeredfromeach disciplinecontainedcontents ofsyllabus (unit wise) withlists of referencebooks is givenbelow. Other relevant details likeobjectives, course outcome, topic indetail, pattern of assessment, additional books for study and reference etc. will be prepared in the form of course file by the faculty and communicated to the students well in advance before start of each semester.

The courses of fered in specialization in Mathematics program are structured in following levels-

CoursesinI-II Semesters:

The first level spans courses offered during the first two semesters of the Bachelor of Science(Hons) Program. These courses are common and mandatory for all students. Based on their interests, the students specialize after completing the fourth semester. For this reason, the first level courses are designed to cover the basic concepts in physics along with some skill Enhancement courses in a very comprehensive manner, sincetheycouldbetheonlyphysics courses takenbystudents specializing other disciplines. These coursesare meant to give the various approaches and analyses in Physics as well as to prepare them for advanced courses in later years of study. Mathematics courses in the first four semesters offer all students an exposure to both the rigor and breadth of physics, concentrating mainly on mechanics, waves and optics, electricity and magnetism, and quantum physics. There are Laboratory Courses that expose them to key experiments and teach them skills in handling basic equipment. In addition, there are Interdisciplinary Courses offered during this period: Mathematical Methods that provides the basic mathematical tools needed for a program in science, and Thermodynamics that provides anintroductiontotheconcepts neededfor thefurther studyof physics and chemistry.

 $B.\ Choice Based Credit System (CBCS)$

ChoiceBasedCreditSystem (CBCS)isaversatileandflexibleoptionfor eachstudenttoachievehistargetnumber of credits as specified by the UGC and adopted by our university.

The following is the course module designed for the B.Sc.(H)(Physics) programme:

Corecompetency: Students will acquire core competency in Physics and in allied subject areas.

$\label{lem:program} Program/DisciplineSpecificElectiveCourse(DSEC):$

Skilledcommunicator: The course curriculum incorporates basics and advanced training in order to make a graduate student capable of expressing the subject through technical writing as well as through oral presentation.

Critical thinker and problem solver: The course curriculumalso includes components that can be helpful to graduate students to develop critical thinking ability by way of solving problems/numerical using basic& advance knowledge and concepts of physics.

Senseofinquiry:Itisexpectedthatthecoursecurriculumwilldevelopaninquisitivecharacteristicamongthe students through appropriate questions, planning and reporting experimental investigation.

Ethical awareness/reasoning: Agraduatestudentrequiresunderstandinganddevelopingethical awareness/reasoning which the course curriculums adequately provide.

Lifelong learner: The course curriculum is designed to inculcate a habit of learning continuously through use of advanced ICTtechniqueandotheravailable techniques/books/journalsfor personalacademicgrowth aswell asfor increasing employability opportunity.

Value Added Course (VAC): A value added audit course is a non-credit course which is basically meant to enhance general ability of students in areas like soft skills, quantitative aptitude and reasoning ability - required for the overall development of a student and at the same time crucial for industry/corporate demands and requirements. The student possessing these skillswill definitelydevelop acumen to perform well during therecruitment process of any premier organization, conquering higher education and will have the anticipated confidence to face the interview. Moreover, these skills are also essential in day-to-day life of the corporate world. The aim is to nurture every student for making effective communication, developing aptitude and a general reasoning ability for a better performance, as desired in corporate world. There shall be four courses of Aptitude in Semester I, II, III&IV semesters and two courses of Soft Skills in III&IV Semesters and will carry no credit, however, it will be compulsory for every student to pass these courses with minimum

45%markstobeeligible for the certificate. These marks will not be included in the calculation of CGPI. Students have to specifically be registered in the specific course of the respective semesters.

SkillEnhancementCourse: This course may be chosen from a pool of courses designed to provide value-based and/or skill-based knowledge.

Generic/Open Elective Course (OEC): Open Elective is an interdisciplinaryadditional subject that is compulsory in a program. The score of Open Elective is counted in the overall aggregate marks under Choice Based Credit System (CBCS). Each Open Elective paper will be of 3 Credits in II, IIIand IV semesters. Each student has to take Open/Generic Electives from department other than the parent department. Core / Discipline Specific Electives will not be offered as Open Electives.

Mandatory Course (MC): This is a compulsory course but audit that does not have any choice and will be of 3 credits. Each student of B.Sc. (H) Program has to compulsorily pass the Environmental Studies and Disaster management (credit not included in curriculum).

$\pmb{C.\ PROGRAMOUTCOMESOFB.Sc.Physics(Hons)}\\$

PO-01	Disciplinary Knowledgeand skill	Understanding of major concepts, theoretical principles and experimental findings in Physics and its different subfields like Astrophysicsand Cosmology, Material science, Nuclear and Particle Physics, Condensed matter Physics, Atomic and Molecular Physics, Mathematical Physics, Analytical dynamics, Spacescience and other related fields of study, including broader interdisciplinary subfields like Chemistry, Mathematics, Life sciences, Environmental sciences, Atmospheric Physics, Computer science, Information Technology etc.
PO-02	Criticalthinker and problem solver	Identify, formulate, review research literature, and analyzecomplex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO-03	Design/Develop ment of Solutions	Design solutions for complex engineering problems and design Systemcomponentsorprocessesthatmeetthespecifiedneeds withappropriateconsiderationforthepublichealth andsafety,and thecultural,societal,andenvironmentalconsiderations.
PO-04	Conduct Investigations ofComplex Problems	Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
PO-05	Moderntool usage	Create, select, and apply appropriate techniques, resources, and modernengineeringandITtoolsincludingpredictionandmodeling tocomplexphysicalactivitieswithanunderstandingofthe limitations.
PO-06	ThePhysicist and society	Applyreasoninginformedbythecontextualknowledgetoassess societal,health,safety,legalandculturalissuesandtheconsequent responsibilitiesrelevanttotheprofessionalengineeringpractice.
PO-07	Environment and sustainability	Understand the impact of the professional solutions in societal and environmentalcontexts, and demonstrate the knowledge of, and needfors ustainable development.
PO-08	Communication	Incorporatesbasicsandadvancedtraininginordertomakeagraduatestu dentcapableofexpressingthesubjectthrough technicalwritingaswellasthroughoralpresentation.

PO-09	Ethics	Responsible citizen of India and be aware of moral and ethical baseline of the country and the world. They are expected to define their core ethical virtues good enough to distinguish whatconstrues as illegal and crime in Indian constitution. Emphasis be givenonacademicandresearchethics,includingfairBenefit Sharing,Plagiarism,ScientificMisconductandsoon.							
PO-10	Individualand Teamwork								
PO-11	Project Management and Finance	become a skilled project manager by acquiring knowledge about chemistry project management, writing, planning, study of ethical standardsandrulesandregulationspertainingtoscientificproject operation.							
PO-12	Life-long learning	Inculcate a habit of learning continuously through use of advanced ICTtechniqueandotheravailabletechniques/books/journalsfor personalacademicgrowthaswellasforincreasingemployability opportunity.							

D. ProgramSpecificOutcomes:

- **PSO 1**:Recognize the importance of mathematical modeling simulation and computing, and the role of approximation and mathematical approaches to describing the physical world.
- **PSO 2**: Demonstrate the ability to use skills in Physics and its related areas of technology for formulating and tacklingPhysics-relatedproblemsandidentifyingandapplyingappropriatephysical principlesandmethodologies to solve a wide range of problems associated with Physics.
- **PSO 3**: Develop the ability to apply the knowledge acquired in the classroom and laboratories tospecific problems in theoretical and experimental Physics.

E. ProgramEducationalObjectives(PEO's)

- **PEO 1**: Emphasize the discipline of Physics to be the most important branch of science for pursuing the interdisciplinary and multidisciplinary higher education and/or research in interdisciplinary and multidisciplinaryareas.
- **PEO 2**: Emphasize the importance of Physics as the most important discipline for sustaining the existing industries and establishing new ones to create job opportunities at all levels of employment.
- **PEO 3**: Enhance their professional career through lifelong learning to take-up challenging tasks and adapt to a rapidly changing environment

F. Pedagogy&Uniquepracticesadopted:

"Pedagogyisthemethodandpracticeofteaching,especiallyfor teachingan academicsubject or theoretical concept". Inaddition toconventionaltime-testedlecturemethod,theinstitutewill emphasizeon experiential learning:

Role Play & Simulation: Role- play and simulation are forms of experiential learning. Learners take on different roles, assuming a profile of a character or personality, and interact and participate in diverse and complex learning settings. Role-play and simulation function as learning tools for teams and groups or individuals as they "play" onlineorface-to-face. Theyalterthepowerratios inteaching and learning relationships between students and

educators, as students learn through their explorations and the viewpoints of the character or personality they are articulating in the environment. This student-centered space can enable learner-oriented assessment, where the design of the task is created for active student learning. Therefore, role-play& simulation exercises such as virtual share trading, marketing simulation etc. are being promoted for the practical-based experiential learning of our students.

Video BasedLearning(VBL)&Learning throughMovies (LTM): These days technology has taken a front seat and classroomsarewell equippedwith equipmentandgadgets. Video-based learninghas become indispensable part oflearning. Similarly, studentscanlearn various concepts through videos. In fact, manyteachers give examples from videosduring their discourses. Makingstudents learn few important theoretical concepts through VBL<M is a good idea and method. The learning becomes really interesting and easy as videos add life to concepts and make the learning engaging and effective. Therefore, our institute is promoting VBL& LTM, wherever possible.

Projects and Dissertation: The students, whotake up experiential projects in project and Dissertation offer in final year, where senior faculties with a stake in teaching guide them, drive the learning. All students are encouraged todo some technical project other their regular classes.

Industrial Visits: Industrial visit are essential to give students hand-on exposure and experience of how things and processeswork in industries. Our institute organizes such visits to enhance students' exposure to practical learning and work out for areport of such a visitrelating to their specific topic, course or even domain.

MOOCs: Students may earn credits by passing MOOCs as decided by the college. Graduate level programs may award Honors degree provided students earn pre-requisite credits through MOOCs. University allows students toundertake additional subjects/course(s)(In-house offered by the university through collaborativeefforts or courses in the open domain by various internationally recognized universities)and to earn additional credits on successful completion of the same. Each course will be approved in advance by the University following the standard procedure of approval and will be granted credits as per the approval. Keeping this in mind, University proposed and allowed a maximum offour creditstobe allocated for each MOOC courses. In the pilot phase it is proposed that a student undertaking and successfully completing a MOOC course through only NPTEL could be given 4 credits for each MOOC course.

For smooth functioningandmonitoringoftheschemethefollowing shallbetheguidelinesforMOOC courses, Add- on courses carried out by the College from time to time.

- a) ItwillnecessaryforeverystudenttotakeatleastoneMOOCCoursethroughoutthe programme.
- b) There shall be a MOOC co-ordination committee in the College with a faculty at the level of Professor heading the committee and all Heads of the Department being members of the Committee.
- c) The Committeewill list out coursesto be offeredduringthe semester, which could be requested by the department or the students and after deliberating on all courses finalize a list of courses to be offered with 4credits defined for each course and themode of credit consideration of the student. The complete process shall be obtained by the College before end of June and end of December for Odd and Even semester respectively of they ear in which the course is being offered. In case of MOOC course, the approval will be valid only for these mester on offer.
- d) Students will register for the course and the details of the students enrolling under the course along with the approval of the Vice Chancellor will be forwarded to the Examination department within fifteen days of start of the semester by the Coordinator MOOC through the Principal of the College.
- e) Aftercompletion of MOOC course, Studentwill submitthe photocopy of Completion certificate of MOOC Course to the Examination cell as proof.
- $f) \qquad Markswill be considered which is mentioned on Completion certificate of MOOC Course.$
- g) College will consider the credits only in case a student fails to secure minimum required credits then the additional subject(s) shall be counted for calculating the minimum credits required for the award of degree.

Special Guest Lectures (SGL) &Extra MuralLectures (EML): Some topics/concepts need extra attentionand effortsastheyeithermaybehigh indifficultylevelorrequiresexpertsfrom specific industry/domainto make things/concepts clear for a better understanding from the perspective of the industry. Hence, to cater the present needs of industrywe organize such lectures, as part of lecture-series and invite prominent personalities from academia and industry from time to time to deliver their vital inputs and insights.

Student Development Programs (SDP): Harnessing and developing theright talent for the right industry an overall development of a student is required. Apart from the curriculum teaching various student development programs (training programs) relating to soft skills, interviewskills, SAP, Advanced excel training etc. that may be required as per the need of the student and industry trends, are conducted across the whole program. Participation in such programs is solicited through volunteering and consensus.

IndustryFocusedprogrammes: Establishing collaborations with various industry partners to deliver the programme on sharing basis. The specific courses are to be delivered by industry experts to provide practice-based insight to the students.

Special assistance program for slow learners& advance learners: There is dedicated system to assessing and identify the slow and fast learner students. After this, a mechanism to correcting knowledge gap through, special program for slow and fast learner. In terms of advance topics / research based problems were used to learning challenges will be provided to the fast learners.

Inductionprogram: Everyyear 3weeksinduction programisorganized for 1 styear students and senior students to make them familiarize with the entire academic environment of university including Curriculum, Classrooms, Labs, Faculty/ Staff members, Academic calendar and various activities.

Mentoring scheme: There is Mentor-Mentee system. One mentor lecture is provided per week in a class. Students can discuss their problems with mentor who is necessarily a teaching faculty. In this way, student's problems or issues can be identified and resolved.

Competitive exam preparation: Students are provided with one class in every week for GATE/ Competitive exams preparation.

Extra-curricular Activities: Organizing & participation in extracurricular activities will be mandatory to help studentsdevelopconfidence&faceaudienceboldly.Itbringsout their leadership qualities along with planning & organizing skills. Students undertake various cultural, sports and other competitive activities within and outside then campus. This helps them build their wholesome personality.

Career & Personal Counseling: - Identifies the problem of student as early as possible and gives time to discuss their problems individually as well as with the parents. Counseling enables the students to focus on behavior and feelings with a goal to facilitate positive change. Its major role lies in giving: Advice, Help, Support, Tips, Assistance, and Guidance.

Participation in Flip Classes, Project based Learning (A2 Assignment), Workshops, Seminars & Writing & Presenting Papers: Departments plan to organize the Flip Classes; Project based Learning (A2 Assignment), workshops, and Seminars& Guest lecturers time to time on their respective topics as per academic calendar. Students must have to attend these programs. This participation would be countin themarks of general Discipline& General Proficiency which is the part of course scheme as non-credit course.

Formation of Student Clubs, Membership & Organizing & Participating events: Every department has the departmental clubs with thespecific club's name. Theentirestudent's activity would be performed by the club. One faculty would be the coordinator of the student clubs & students would be the members with different responsibility.

Bachelor of Sciences (Hons) (PCM)V-2020

Capability Enhancement & Development Schemes: The Institute has these schemes to enhance the capability and holistic development of the students. Following measures/initiatives are taken up from time to time for the same: Career Counseling, Soft skill development, Remedial Coaching, Bridge Course, Language Lab, Yoga and Meditation, Personal Counseling

Library Visit & Utilization of QLRC: Students may visit the library from morning10 AM to evening 8 PM. Library created its resources Database and provided Online Public Access Catalogue (OPAC) through which users can be accessed from anyofthecomputer connected in the LAN can knowthestatus of the book. Now we are in process to move from OPAC to KOHA.

Detailed Syllabus (Semester wise /course wise)

Year -1

SEMESTER 1

EG3103	Title: English Communication	LTPC 2002
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To impart basic English communication skills to the student-writing, speaking, reading and listening.	
Expected Outcome	The student will gain a sound understanding of the basics of English which will help him in social and professional situations.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Fundamentals of Communication	5
to Communication: Qualitie	Definition, Importance; Forms of Communication, Channels of Communicator and Good Communicator.	cation; Barriers
Unit II	Types of Communication	5
	nmunication: Audio-Visual Communication; Effective speaking; Types (Proxemics, Chronemics, Paralanguage.	of Non-verbal
Unit III	Listening Skills	4
Definition and Importance; Barriers; SWOT Analysis.	Types of Listening Skills; Intelligent Listening; Barriers to Listening and	dovercoming
Unit IV	Writing Skills	5
Use of Grammar; Business	Correspondence; Presentations; Report Writing, Project; Notice and Circ	culars.
Unit V	Use of Communication Skills	5
Basics of Phonetics; Preso	entation Skills- Dos & Don'ts; Extempore, Debate, Role Play, In	terview, Group
Text Books	1.Ruby Gupta, Basic Technical Communication, Foundation Books.	
Reference Books	1.P K Agrawal and A K Mishra, Business Communication, SahityaBal Publication. 2. Vinod Mishra and NarendraSukla, Business Communication, SBPD House. 3. N Gupta and P Mahajan, Business Communication, SahityaBahw	Publishing
Mode of Evaluation	Internal and External Examinations	
Recommendation by Board of Studies on	20-06-2020	
Date of approval by the Academic Council	13-09-2020	

Course Outcome for EG3103

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None(Use , for more than One)
CO1	Students will be able to discuss the concept of communication skills	1	S
CO2	Students will be able to increase self awareness about english language.	2	S
CO3	Students will be able to develop public speaking abilities.	1	S
CO4	Students will be able to present each and everything in correct manner.	2	Enp
CO5	Students will be able to discuss the concept of barriers to communication.	2	None

		/ /
CY3205	Title: Environmental Studies	L T P C 2 0 0 2
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	Creating awareness among engineering students about the importance of environment, the effect of technology on the environment and ecological balance is the prime aim of the course.	
Expected Outcome	Students will understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Introduction to Environmental studies & Ecosystems	5
3.6.1(1111111111111111111111111111111111		C 1

Multidisciplinary nature of environmental studies, Scope and importance, Need for public awareness. Concept, Structure and function of an ecosystem, Energy flow in an ecosystem: food chains, food webs and ecological pyramids. Examples of various ecosystems such as: Forest, Grassland, Desert, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Unit II Natural Resources: Renewable & Non- renewable resources 5

Land as a resource, land degradation, landslides (natural & man-induced), soil erosion and desertification. Forests & forest resources: Use and over-exploitation, deforestation. Impacts of deforestation, mining, dam building on environment and forests. Resettlement and rehabilitation of project affected persons; problems and concerns with examples. Water resources: Use and over-exploitation of surface and ground water, floods, drought, conflicts over water (international & inter-state). Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems with examples. Energy resources: Renewable and non renewable energy sources, use of alternate energy sources, growing energy needs.

Unit III Biodiversity & Conservation 5

Levels of biological diversity: genetic, species and ecosystem diversity. Bio geographic zones of India. Ecosystem and biodiversity services. Biodiversity patterns and global biodiversity hot spots, India as a mega-biodiversity nation; Endangered and endemic species of India. Threats to biodiversity: Habitat loss, poaching of wildlife, man-wildlife conflicts, biological invasions. Conservation of biodiversity: In-situ and Ex-situ conservation.

Unit IV Environmental Pollution 4 Environmental pollution and its types. Causes, effects and control measures of :a) Air pollution b) Water pollution –

freshwater and marine c) Soil pollution d) Noise pollution e) Thermal pollution

Nuclear hazards and human health risks, Solid waste management: Control measures of urban and industrial waste.

Unit V Environmental Policies & Practices 5

Concept of sustainability and sustainable development. Water conservation & watershed management. Climate change, global warming, acid rain, ozone layer depletion. Disaster management: floods, earthquake, cyclones and landslides. Wasteland reclamation. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation. Environment: rights and duties. Population growth.

Field work Visit to a local polluted site-Urban/Rural/Industrial/Agricultural, Study of simple ecosystems-pond, river, hill slopes, etc.

Text Books	1. Bharucha. E, <u>Textbook of Environmental Studies for Undergraduate Courses</u> .
Reference Books	KaushikAnubha, Kaushik C P, Perspectives in Environmental Studies New Age Publication
Mode of Evaluation	Internal and External Examinations

Recommendation by Board of Studies on	13-06-2020
Date of approval by the Academic Council	13-09-2020

Course Outcome for CY3205

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None(Use , for more than One)
CO1	Students can be able to correlate the human population growth and its trend to the environmental degradation and develop the awareness about his/her role towards environmental protection and preventions.	1	S
CO2	Students should be able to understand the solutions related to environmental problems related with the renewable & non-renewable resources.	2	S
CO3	Students should be able to understand the importance of ecosystem and biodiversity and the method of conservation of biological diversity.	1	S
CO4	Students should be able to understand different components of the environment and their function and the effects pollution on environment and should be able to understand the concept of sustainable development.	2	None
COS	Students should be able to correlate the human population growth and its trend to the environmental degradation and develop the awareness about his/her role towards environmental protection and preventions.	2	En

PH3106	Title: Mechanics	LTPC 3 1 0 4								
Version No.	Version No. 1.1									
Course Prerequisites	Nil									
Objectives	To Study the basics of Mechanics									
Expected	The student will gain understanding of the basics of Mechanics which will help									
Outcome	him in understanding practical life situations									
Unit No.	Unit Title	No. of hours (per Unit)								
Unit I	Work and Energy	9								
and unstable equilib	nergy Theorem. Conservative and non- conservative forces. Potential Energy. Energyment. Elastic potential energy. Force as gradient of potential energy. Work & Potential forces. Law of conservation of Energy.	ential energy. Work								
Unit II	Collisions & Rotational Dynamics	8								
of Mass and Labo conservation of ang	Centre of Mass, Principle of conservation of momentum Impulse, Elastic and inelastic collisions between particles. Centre of Mass and Laboratory frames, Angular momentum of a particle and system of particles. Torque. Principle of conservation of angular momentum. Rotation about a fixed axis. Moment of Inertia. Calculation of moment of inertia for rectangular, cylindrical and spherical bodies. Kinetic energy of rotation. Motion involving both translation and rotation.									
Unit III	Gravitation	5								
Lawofgravitation.G	ravitationalpotentialenergy.Inertial&gravitational									
	eldduetosphericalshellandsolidsphere.Kepler's Laws. Satellite in circular orbit & app	olications.								
Unit IV	Central force Motion and Oscillations	7								
The energy equation and its solution. Kin	under a central force field. Two-body problem and its reduction to one-body problem and energy diagram. Review of SHM (Simple Harmonic Oscillations. Differential energy, potential energy, total energy and their time - average values). Damped and steady states; Resonance, sharpness of resonance; power dissipation and Qua	al equation of SHM loscillation. Forced								
Unit V	Non-Inertial Systems& Special Theory of Relativity	7								
Postulates of Specia Time dilation. Rela Variation of mass w	Non-inertial frames and fictitious forces. Uniformly rotating frame. Michelson-Morley Experiment and its outcome Postulates of Special Theory of Relativity. Lorentz Transformations. Simultaneity and order of events. Lorentz contraction Time dilation. Relativistic transformation of velocity, frequency and wave number. Relativistic addition of velocities. Variation of mass with velocity. Mass less Particles. Mass-energy Equivalence. 1. Course Outcome for PH3106

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None(Use , for more than One)
CO1	Students will be able to understand the role of vectors and coordinate systems in Physics. Explain the conservation of energy, momentum, angular momentum and apply them to basic problems	2	Em
CO2	Students will be able to Write the expression for the moment of inertia about the given axis of symmetry for different uniform mass distributions. Understand the analogy between translational and rotational dynamics, and application of both motions simultaneously in analyzing rolling with slipping.	2	S
CO3	Students will be able to explain gravitational field and apply Kepler's law to describe the motion of planets and satellite in circular orbit.	3	S
CO4	Students will be able to explain the phenomena of simple harmonic motion and damped and driven harmonic motion and the properties of systems executing such motions.	2	S
CO5	Students will be able to describe how fictitious forces arise in a non-inertial frame, special relativistic effects and their effects on the mass and energy of a md	3	S

CY3106	Title: Atomic Structure & Chemical Bonding	LT PC 3104				
Version No.	sion No. 1.0					
Course Prerequisites	Nil					
Objectives	To acquire basic knowledge about atomic structure, bonding, molecular structure of various compounds					
Expected Outcome	Understanding the atomic structure, basics of quantum chemistry and its applications.					
Unit No.	Unit Title	No. of hours (per Unit)				
Unit I	8					

Bohr's theory, its limitations and atomic spectrum of hydrogen atom. Wave mechanics:de Broglie equation, Heisenberg's uncertainty principle and its significance, Pauli's exclusion principle, Hund's rule of maximum multiplicity, Aufbau's principle and its limitations

Unit II Quantum Numbers 8

Variation of orbital energy with atomic number. Schrodinger's wave equation. Quantum numbers and their significance. Normal and orthogonal wave functions. Sign of wave functions. Radial and angular wave functions. Shapes of s, p, d and f orbital's.

Unit III Chemical Bonding: Ionic Bond 8

General characteristics, types of ions, size effects, radius ratio ruleand its limitations. Packing of ions in crystals. Born-Lande equation withderivation and importance of Kapustinskii expression for lattice energy. Madelung constant, Born-Haber cycle and its application, Solvation energy. Covalent character in ionic compounds, polarizing power and polarizability. Fajan's rules and consequences of polarization.

Unit IV Chemical Bonding: Covalent Bond 10

Lewis structure, Valence Bond theory (Heitler-London approach). Hybridization, Molecular orbital theory. Molecular orbital diagrams of diatomic and simple polyatomic molecules N2, O2, C2, B2, F2, CO, NO, and their ions; HCl, BeF2, CO2, (idea of s-p mixing and orbital interaction to be given). Formal charge, Valence shell electron pair repulsion theory (VSEPR), shapes of simple molecules and ions containing lone pairs and bond pairs of electrons, multiple bonding, and bond lengths. Ionic character in covalent compounds: Bond moment and dipole moment.

Unit V Metallic Bond & Chemical forces 8

Qualitative idea of valence bond and band theories. Semiconductors and insulators, defects in solids. Vander Waals forces, ion-dipole forces, dipole-dipole interactions, induced dipole interactions, Instantaneous dipole-induced dipole interactions. Repulsive forces, Hydrogen bonding (theories of hydrogen bonding, valence bond treatment)

PH3141	Title: Mechanics Lab	LTPC 0 0 2 1
Version No.	1.1	
Course Prerequisites	Nil	
Objectives	To make students familiar with the fundamental laws featuring in the field of mechanics	
Expected Outcome	Students shall conceptualize and firmly grasp the basic physics & mechanics with knowledge of fundamental reporting of experimental results	
	List of Experiments	

At least 08 experiments from the following

- 1. To study the random error in observations.
- 2. To determine the height of a building using a Sextant.
- 3. To study the Motion of Spring and calculate (a) Spring constant, (b) g and (c) Modulus of rigidity.
- 4. To determine the Moment of Inertia of a Flywheel.
- 5. To determine g and velocity for a freely falling body using Digital Timing Technique
- 6. To determine the Young's Modulus of a Wire by Optical Lever Method.
- 7. To determine the Modulus of Rigidity of a Wire by Maxwell's needle.
- 8. To determine the elastic Constants of a wire by Searle's method.
- 9. To determine the value of g using Bar Pendulum.
- 10. To determine the value of g using Kater's Pendulum.

CY3140	Title: :Qualitative Analysis Lab	LTPC 0021
Version No.	1.1	
Course Prerequisites		
Objectives	To provide practical knowledge about preparation of standard solutions and different kinds of titrations.	
Expected Outcome	Student will be able to learn Calibration of instruments and meth involved by performing experiments.	
Exp No	Experiment Title	•

- 1. Measurement of pH of different solutions using pH-meter.
- 2. Preparation of buffer solutions
 - (i) Sodium Acetate-Acetic acid
 - (ii) Ammonium Chloride-Ammonium Hydroxide
- 3. Measurement of the pH of buffer solutions and comparison of the values theoretical values.
- 4.pH metric titrations ofstrong acid and strong base
- 5. pH metric titrations ofweak acid and strong base
- 6. Estimation of Carbonate and Hydroxide present together in mixture.
- 7. Estimation of Carbonate and Bicarbonate present together in a mixture.
- 8. Estimation of Fe (II) and Oxalic acid using standardized KMnO4 solution.
- 9. Estimation of Oxalic acid and Sodium Oxalate in a given mixture.
- 10. Estimation of Fe (II) with K2Cr2O7 using internal (diphenylamine, anthranilic acid) and external indicator.

Version No.	1.0	
Course Prerequisites	Nil	
Objectives		
Expected Outcome	The student will develop good skills in English communication which will enable him to handle various life situations confidently.	
	List of Experiments	

- 1. Grammar-tenses practice
- 2.Listening comprehension exercises
- 3. Responding in everyday life situations
- 4. Common conversation skills

Requesting- Responding to Requests

Congratulating

Expressing sympathy and condolences

Expressing Disappointment

- 5. Asking Questions-Polite responses
- 6. Apologizing-, Forgiving
- 7. Giving Instructions

Getting and Giving Permission

- 8. Group discussion
- 9. Public speaking
- 10. Mother tongue influence and correction

Bachelor of Sciences (Hons) (PCM)V-2020

EC3140	Title: Basic Electrical and Electronics Engineering Lab	LTPC 0021
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To make students familiar with the fundamental laws featuring in the field of Electrical and Electronics Engineering.	
Expected Outcome	Students shall conceptualize and firmly grasp the basic electrical & electronic engineering laws along with the knowledge of fundamental circuits governing the functioning of important devices.	

List of Experiment

- 1. To verify the Kirchhoff's current and voltage laws.
- 2. To verify the Superposition theorem.
- 3. To verify the Thevenin's theorem.
- 4. To verify the Norton's theorem.
- 5. To verify the maximum power transfer theorem.
- 6. To study the V-I characteristics of p-n junction diode.
- 7. To study the diode as clipper and clamper.
- 8. To study the half-wave & full-wave rectifier using silicon diode.
- 9. To study transistor in Common Base configuration & plot its input/output characteristics.
- 10. To study various logic gates & verify their truth tables.

Mode of Evaluation	Internal and External Examinations

Specialization in Chemistry

CY3107	Title: Solid States & Ionic Equilibrium	LTPC 3004						
Version No.	1.0							
Course Prerequisites	Nil							
Objectives	To grasp the concepts of thermodynamics, thermo chemistry, chemical equilibrium							
Expected Outcome	Learning the solubility of ionic compounds and their solution properties							
Unit No.	Unit Title	No. of hours (per Unit)						
Unit I	Solid States	6						
of symmetry, symmetry elessystems and fourteen Bravai								
Unit II	Diffraction	6						
	aw, a simple account of rotating crystal method and powder pattern methof NaCl, CsCl and KCl. Defects in crystals. Glasses and liquid crystals.	nod. Analysis of						
Unit III	Ionic Equilibrium	8						
	electrolytes, degree of ionization, factors affecting degree of ionization, ior Ionization of weak acidsand bases, pH scale, common ion effect; dissociated (exact treatment).							
Unit IV	Solution	8						
derivation of Henderson equ	of hydrolysis constant, degree of hydrolysis and pH for different salts. In action and its applications; buffer capacity, buffer range, buffer action and ry and biochemical processes in the human body.							
Unit V	Solubility	8						
treatment of acid – base titra of indicators and their lin constants.	oduct of sparingly soluble salts – applications of solubility product princ tion curves (calculation of pH at various stages). Theory of acid – base indinitations. Multistage equilibrium in polyelectrolyte systems; hydrolysis	icators; selection and hydrolysis

Version No.	1.1	
Course Prerequisites		
Objectives	To understand the concept of Surface tension and Viscosity	
Expected Outcome	Learning application of physical chemistry laws experimentally	
Exp No	ExpTtitle	

- 1. To determine the surface tension by Drop number
- 2. To determine the surface tension by Drop weight method.
- 3. Study the effect of variation of viscosity of an aqueous solution with the concentration of solute.
- 4. Preparation of buffer solution of Sodium acetate-acetic acid
- 5.To determine the relative surface tension of a liquid with respect to water at room temperature by Stalgmometer.
- 6. The adsorption of aqueous acetic acid by activated charcoal and to study the adsorption isotherm.
- 7.To determine the solubility of salt at three different temperatures.

PH3206	Title: Electricity and Magnetism	LTPC 3003
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To study basic of electromagnetic	
Expected Outcome	Students will be able to understand the basic phenomenon of electricity and magnetism.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Electric Field and Electric Potential	11
Electric field : E	lectric field lines. Flectric flux. Gauss's Law with applications to charge dist	ributions With

Electric field: Electric field lines, Electric flux, Gauss's Law with applications to charge distributions With spherical, cylindrical and planar symmetry. Conservative nature of Electrostatic Field. Electrostatic Potential Laplace's Potential And Electric Field of a dipole. Force and Torque on a dipole. Electrostatic energy of system of charges. Electrostatic energy of a charged sphere. Conductors in an electrostatic Field. Surface charge and force on a conductor. Capacitance of a system of charged conductors. Parallel-plate capacitor. Capacitance of an isolated conductor. Method of Images and its application to:(1) Plane Infinite Sheet and (2)Sphere.

Unit II Dielectric Properties of Matter 7

Electric Field in matter. Polarization, Polarization Charges. Electrical Susceptibility and Dielectric Constant.

Capacitor (parallel plate, spherical, cylindrical) filled with dielectric. Displacement vector **D**. Relations between **E**, **P** and **D**. Gauss' Law in dielectrics.

Unit III Magnetic Field 7

Magnetic force between current elements and definition of Magnetic Field **B**. Biot-Savart's Law and its simple applications: straight wire and circular loop. Current Loop as a Magnetic Dipole and its Dipole Moment (Analogy with Electric Dipole). Ampere's Circuital Law and its application to (1) Solenoid and (2) Toroid. Properties of **B**: curl and divergence. Vector Potential. Magnetic Force on (1) point charge (2) current carrying wire (3) between current elements. Torque on a current loop in a uniform Magnetic Field.

Unit IV Magnetic Properties of Matter & Electromagnetic Induction

5

Magnetization vector (\mathbf{M}). Magnetic Intensity(\mathbf{H}). Magnetic Susceptibility and permeability. Relation between \mathbf{B} , \mathbf{H} , \mathbf{M} . Ferromagnetism. B-H curve and hysteresis. Faraday's Law. Lenz's Law. Self Inductance and Mutual Inductance. Reciprocity Theorem. Energy stored in a Magnetic Field. Introduction to Maxwell's Equations. Charge Conservation and Displacement current

Unit V Electrical Circuits & Network theorems 6

. AC Circuits: Kirchhoff's laws for AC circuits. Complex Reactance and Impedance. Series LCR Circuit: (1) Resonance, (2) Power Dissipation and (3) Quality Factor, and (4) Band Width. Parallel LCR Circuit Ideal constant-voltage and constant-current Sources. Review of Kirchhoff's Current Law & Kirchhoff's Voltage Law. Mesh & Node Analysis. Thevenin theorem, Norton theorem, Superposition theorem, Reciprocity Theorem, Maximum Power Transfer theorem. Applications to dc circuits.

Course Outcome for PH3206

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None(Use , for more than One)
CO1	Students will be able to demonstrate Coulomb's law for the electric field, and apply it to systems of point charges as well as line, surface, and volume distributions of charges. Explain and differentiate the vector (electric fields, Coulomb's law) and scalar (electric potential, electric potential energy) formalisms of electrostatics. Apply Gauss's law of electrostatics to solve a variety of problems.	2	S
CO2	Students will gain knowledge on electric current, resistance and capacitance in terms of electric field and electric potential. Demonstrate a working understanding of capacitors.	2	S
CO3	Students will be able to describe the magnetic field produced by magnetic dipoles and electric currents. Also list examples where its effects are observed.	3	S
CO4	Students will be able to explain Faraday-Lenz and Maxwell laws to articulate the relationship between electric and magnetic fields. Also give basic understanding of magnetic properties of matter.	2	S
CO5	Students will be able to apply Kirchhoff's rules to analyze AC circuits consisting of parallel and/or series combinations of voltage sources and resistors and to describe the graphical relationship of resistance, capacitor and inductor. They will be also able to apply various network theorems such as Superposition Theorem, Thevenin Theorem, Norton Theorem, Reciprocity Theorem, Maximum Power Transfer, etc. and their applications in electronics, electrical circuit analysis, and electrical machines.	3	S

CY3206	Title: Thermodynamics & its Applications	LTPC 3003
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	The aim of this paper is to expose the students with the knowledge in Heat and thermodynamics	
Expected Outcome	Understand the basic concepts of thermal conductivity and apply the basic thermodynamic properties.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Laws of thermodynamics	8

First law: Concept of heat, q, work, w, internal energy U and statement of first law; enthalpy, H, relation between heat capacities.

Second Law: Concept of entropy; thermodynamic scale of temperature, statement of the second law of thermodynamics. Calculation of entropy change for reversible and irreversible processes.

Third Law: Statement of third law, concept of residual entropy, calculation of absolute entropy of molecules.

Unit II Thermo chemistry

8

Heat of reactions: standard states; enthalpy of formation of molecules and ions and enthalpy of combustion and its applications; calculation of bond energy, bond dissociation energy and resonance energy from thermo chemical data, effect of temperature (Kirchoff's equations) and pressure on enthalpy of reactions.

Free Energy Functions: Gibbs and Helmholtz energy; variation of S, G, A with T, V, P; Free energy change and spontaneity.

Unit III System of variable composition

Partial molar quantities, dependence of thermodynamic parameters on composition; Gibbs- Durham equation, chemical potential of ideal mixtures, change in thermodynamic functions in mixing of ideal gases.

Unit IV

Chemical Equilibrium

8

Thermodynamic derivation of relation between Gibbs free energy of reaction and reaction quotient. Equilibrium constants and their quantitative dependence on temperature, pressure and concentration. Free energy of mixing and spontaneity; thermodynamic derivation of relations between the various equilibrium constants Kp, Kc and Kx. Le Chatelier principle (quantitative treatment); equilibrium between ideal gases and a pure condensed phase.

Unit V

Solution & Collagative properties

6

Dilute solutions; lowering of vapor pressure, Raoult's and Henry's Laws and their applications.

Excess thermodynamic functions. Thermodynamic derivation using chemical potential to derive relations between the four colligative properties [(i) relative lowering of vapor pressure, (ii) elevation of boiling point, (iii) Depression of freezing point, (iv) osmotic pressure] and amount of solute. Applications in calculating molar masses of normal dissociated and associated solutes in solution.

CO1	Students will learn to solve the linear ordinary differential equation of first order and also learn the standard methods of solving the DE of first order and first degree.	3	S
CO2	Students will learn to solve the second order DE with constant coefficient and know the different methods of finding CF and PI.	2	S
CO3	Students will learn to solve the second order DE with variable coefficient by different methods like Cauchy Euler homogeneous linear DE,Legendre's homogeneous equation etc.	3	S
CO4	Students will gain knowledge about simultaneous equation and total differentiation.	2	S
CO5	Students will learn about some special functions (Legendre polynomial and Bessel functions) and their properties	3	S

PH3240	Title: Electricity and Magnetism Lab	LTPC 0 0 2 1				
Version No.	1.0					
Course Prerequisites	Nil					
Objectives	Learning objectives is to improve confidence in the behavior of electricity and magnetism in our daily life.					
Expected Outcome	To learn and practice the basic concept of magnetism practically.					
List of Evnoviments						

List of Experiments

At least 6 experiments from the following

- 1. To study the characteristics of a series RC Circuit.
- 2. To determine an unknown Low Resistance using Potentiometer.
- 3. To determine an unknown Low Resistance using Carey Foster's Bridge.
- 4. To compare capacitances using De'Sauty's bridge.
- 5. Measurement of field strength B and its variation in a solenoid (determine dB/dx)
- 6. To verify the Thevenin and Norton theorems.
- 7. To verify the Superposition, and Maximum power transfer theorems.
- 8. To determine self inductance of a coil by Anderson's bridge.
- 9. To study response curve of a Series LCR circuit and determine its (a) Resonant frequency, (b) Impedance at resonance, (c) Quality factor Q, and (d) Band width.
- 10. To study the response curve of a parallel LCR circuit and determine its (a) Anti- resonant frequency and (b) Quality factor Q.
- 11. Measurement of charge sensitivity, current sensitivity and CDR of Ballistic Galvanometer
- 12. Determine a high resistance by leakage method using Ballistic Galvanometer.
- 13. To determine self-inductance of a coil by Rayleigh's method.
- 14. To determine the mutual inductance of two coils by Absolute method.

CS3241	Lab							
Version No.	1.0							
Course Prerequisites	Nil							
Objectives	Learning objectives is to improve confidence in technology use an increased awareness of opportunities afforded to individuals with computer application skills.							
Expected Outcome	To learn and practice the basic concept of C language							
List of Experiments								

- 1. Programs using I/O statements and expressions.
- 2. Programs using decision-making constructs.
- 3. Write a program to find whether the given year is leap year or Not? (Hint: not every centurion year is a leap. For example 1700, 1800 and 1900 is not a leap year)
- **4.** Design a calculator to perform the operations, namely, addition, subtraction, multiplication, division and square of a number.
- 5. Check whether a given number is Armstrong number or not?
- 6. Populate an array with height of persons and find how many persons are above the average height.
- 7. Populate a two dimensional array with height and weight of persons and compute the Body Mass Index of the individuals.
- 8. Given a string —a\$bcd./fgl find its reverse without changing the position of special characters. (Example input:a@gh%;j and output:j@hg%;a)
- 9. Convert the given decimal number into binary, octal and hexadecimal numbers using user defined functions.
- 10. From a given paragraph perform the following using built-in functions:
 - a. Find the total number of words.
 - b. Capitalize the first word of each sentence.
 - c. Replace a given word with another word.

CY3242	Title: Thermo Chemistry Lab	LTPC 0021
Version No.	1.1	
Course Prerequisites		
Objectives	To determine heat capacity of calorimeter using standard methods.	
Expected Outcome	To learn methods to calculate enthalpy change of different solutions	
Exp No	Exp Title	

- 1. Demonstration of Bomb Calorimeter
- 2. Determination of Heat capacity of the calorimeter and enthalpy of neutralization of Hydrochloric acid with Sodium Hydroxide.
- 3. Calculation of the Enthalpy of Ionization of Ethanoic acid.
- 4. Determination of heat capacity of the calorimeter and integral enthalpy (endothermic and exothermic) solution of salts
- 5. To determine Heat of solution of a given salt in water by calorimeter
- 6.To determine Heat of hydration of anhydrous Copper Sulphate .

Specialization in Physics

		LTPC						
PH3208	Title: Waves and Optics	3 0 0 3						
Version No.	1.0							
Course Prerequisites	Nil							
Objectives	To study the basic phenomenon of Wave motion and light and its properties							
Expected	tudents will be able to understand the wave motion of oscillators and light							
Outcome	and its impact on our daily life							
Unit No.	Unit Title No. of hours (per Unit)							
Unit I	Superposition of Collinear Harmonic oscillations and two perpendicular Harmonic Oscillations	5						
Simple harmonic m	notion (SHM). Linearity and Superposition Principle. Superposition of two colli	near oscillations						
	quencies and (2) different frequencies (Beats).							
Unit II	Wave Motion	5						
	Waves. Longitudinal and Transverse Waves. Plane Progressive (Travelling) and Wave Velocities. Energy Transport. Intensity of Wave.	Waves. Wave						
Unit III	Superposition of Two Harmonic Waves	8						
Standing (Stationary) Waves in a String: Fixed and Free Ends. Changes with respect to Position and Time. Energy o Vibrating String. Transfer of Energy. Normal Modes of Stretched Strings. Longitudinal Standing Waves and Normal Modes. Pressure of a Longitudinal Wave. Open and Closed Pipes. Phase and Group Velocities. Superposition of N Harmonic Waves.								
Unit IV	Wave Optics, Interference	7						
	ure of light. Definition and properties of wave front. Huygens Principle. Tempora	,						
-	n of amplitude and wave front. Young's double slit experiment. Lloyd's Mirr	-						
	•	of and Fresher's						
-	age on reflection: Stokes' treatment.	1 1 1						
Unit V	Interferometer and Diffraction and Polarization	11						
Resolving Power of Wave. Explanation	ometer-Basics, Double slit. Multiple slits. Diffraction grating. Resolving pof a telescope.Fresnel Diffraction: Fresnel's Assumptions. Fresnel's Half-Period of Rectilinear Propagation of Light. Theory of a Zone Plate: Multiple Fociter's Law, Birefringence, Ordinary and Extraordinary Rays, Nicol Prism, Wave propagation.	Zones for Plane of a Zone Plate

PH3241	Title: Waves and Optics Lab	LTPC 0021
Version No.	1.0	
Objectives	To make students familiar with the fundamental properties governing Wave motion and Optics	
Expected Outcome	Students shall conceptualize and firmly grasp concepts of basic wave motion& optics	
	List of Experiments	

At least 8 Experiments from the following

- 1. To determine wavelength of spectral lines using plane diffraction grating.
- 2. To determine dispersive power and resolving power of a plane diffraction grating.
- 3. To determine the specific rotation of cane sugar solution using half shade polarimeter.
- 4. To determine the frequency of an electric tuning fork by Melde's experiment and verify λ^2 –T law.
- 5. To determine refractive index of the Material of a prism using sodium source.
- 6. To determine the wavelength of sodium source using Michelson's interferometer.
- 7. To determine wavelength of sodium light using Fresnel Biprism
- 8. To determine wavelength of sodium light using Newton's Rings.
- 9. To determine the thickness of a thin paper by measuring the width of the interference fringes produced by a wedge-shaped Film.
- 10. To determine wavelength of (1) Na source and (2) spectral lines of Hg source using plane diffraction grating.
- 11. Generating and digitizing sound and generating Beat pattern using Expeyes device
- 12. To determine velocity of sound using Expeyes device

Specialization in Chemistry

CY3207	Title: s & p Block Elements	LTPC 4004					
Version No.	1.0						
Course	Nil						
Prerequisites							
Objectives	To acquire knowledge about properties of inorganic compounds						
Expected Outcome	It will provide better understanding about structure and properties of halogens, noble gasses and inorganic polymers						
Unit No.	Unit No. Unit Title No. of hour (per Unit)						
Unit I	Chemistry of s & p block elements	8					
Inert pair effect, Relative stability of different oxidation states, diagonal relationship and anomalous behavior of							
first member of each group. Allotropy and catenation. Complex formation tendency of <i>s</i> and <i>p</i> block elements. Hydrides and their classification ionic, covalent and interstitial. Basic beryllium acetate and nitrate.							

Unit II Structure & properties of Inorganic Compounds

Study of the following compounds with emphasis on structure, bonding, preparation, properties and uses. Boric acid and borates, boron nitrides, borohydrides (diborane) carboranes and graphitic compounds,

Unit III Halogens

silanes, Oxides and oxoacids of nitrogen, Phosphorus and chlorine. Peroxo acids of sulphur, interhalogen compounds, polyhalide ions, pseudo halogens and basic properties of halogens.

Noble Gasses

Occurrence & uses, rationalization of inertness of noble gases, Clathrates; preparation and properties of XeF2 and XeF4, XeF6; Nature of bonding in noble gas compounds (Valence bond treatment and MO treatment for XeF2). Molecular shapes of noble gas compounds (VSEPR theory).

Inorganic polymers

Types of inorganic polymers, comparison with organic polymers, synthesis, structural aspects and applications of silicones and siloxanes. Borazines, silicates andphosphazenes, and polysulphates.

1. Cotton, F.A. and Wilkinson, G, Advanced Inorganic Chemistry, Wiley, VCH.

Course Outcome for MA3206

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None (Use , for more than One)
CO1	Student will learn to find the position of any partical in the space, find the areas of triangles, quadrilaterals and circles and shapes.	2	Emp
CO2	Students will gain knowledge on concepts: plane; points; lines; line segments; i rays and length of (straight) line,	3	S
CO3	Students will understand the concepts of advance topics related to two and three dimensional geometry and learn the application of sphere, cone and cylinder and understand geometrical terminology for angles, triangles, quadrilaterals and circles.	3	S
CO4	Students will gain knowledge on directional derivative and gradient and wiil be able to illustrate geometric meanings with the aid of sketches.	3	Enp
CO5	Students will be able to understood the relation between gard ,Div,and Curl Apply gradient to solveproblems involving normal vectors to level surfaces. Explain the concept of a vector integration a plane and in space.	3	S

CY3308	Title: Spectroscopy	LTPC 2203
Version No.	1.0	
Course Prerequisites	None	
Objectives	Spectroscopy is a collective term for scientific technique that investigate the interaction of matter with radiation	
Expected Outcome	Students will learn the important role of spectroscopy in the,structure of organic compounds.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Molecular Spectroscopy	5

Interaction of electromagnetic radiation with molecules and various types of spectra; Born-Oppenheimer approximation. Rotation spectroscopy: Selection rules, intensities of spectral lines, determination of bondlengths of diatomic and linear triatomic molecules, isotopic substitution.

Unit II Vibrational Spectroscopy 7

Classical equation of vibration, computation of force constant, amplitude of diatomic molecular vibrations, anharmonicity, Morse potential, dissociation energies, fundamental frequencies, overtones, hot bands, degrees of freedom for polyatomic molecules, modes of vibration, concept of group frequencies. Vibration-rotation spectroscopy: diatomic vibrating rotator, P, Q, R branches.

Unit III Photochemistry 7

Characteristics of electromagnetic radiation, Lambert-Beer's law and its limitations, physical significance of absorption coefficients. Laws, of photochemistry, quantum yield, actinometry, examples of low and high quantum yields, photochemical equilibrium and the differential rate of photochemical reactions, photosensitized reactions, quenching. Role of photo chemical reactions in biochemical processes, photostationary

Unit IV NMR Spectroscopy 5

Nuclear Magnetic Resonance (NMR) spectroscopy: Principles of NMR spectroscopy, Larmor precession, chemical shift and low resolution spectra, different scales, spin-spin coupling and high resolution spectra, interpretation of PMR spectra of organic molecules. Electron Spin Resonance (ESR) spectroscopy.

Unit V Electronic spectroscopy 5

Electronic spectroscopy: Franck-Condon principle, electronic transitions, singlet and triplet states, fluorescence and phosphorescence, dissociation and pre dissociation, calculation of electronic transitions of polyenes using free electron model.

PH3340	Title: Elements of Modern Physics Lab	LTPC 0 0 2 1
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To provide the knowledge of recent modern advancements in quantum and relativistic physics experiments	
Expected Outcome	Students will be able to learn and practice modern physics experiments and appreciate the shortfall of classical mechanics in explaining certain phenomena.	

At least 06 experiments from following:

- 1. Measurement of Planck's constant using black body radiation and photo-detector
- 2. Photo-electric effect: photo current versus intensity and wavelength of light; maximum energy of photo-electrons versus frequency of light
- 3. To determine work function of material of filament of directly heated vacuum diode.
- 4. To determine the Planck's constant using LEDs of at least 4 different colors
- 5. To determine the wavelength of H-alpha emission line of Hydrogen atom.
- 6. To determine the ionization potential of mercury.
- 7. To determine the absorption lines in the rotational spectrum of Iodine vapour.
- 8. To determine the value of e/m by (a) Magnetic focusing or (b) Bar magnet.
- 9. To setup the Millikan oil drop apparatus and determine the charge of an electron.
- 10. To show the tunneling effect in tunnel diode using I-V characteristics.
- 11. To determine the wavelength of laser source using diffraction of single slit.
- 12. To determine the wavelength of laser source using diffraction of double slits.
- 13. To determine angular spread of He-Ne laser using plane diffraction grating

Specialization in Physics

PH3307	Title: Mathematical Physics I	LTPC 3 1 0 4						
Version No.	1.0							
Course Prerequisites	MA3107, MA3207							
Objectives	The emphasis of the course is on applications in solving problems of interest to physicists. Students are to be examined on the basis of problems, seen and unseen.							
Expected Outcome	Students will be able to solve mathematical problems using Fourier series, partial differential equations and other mathematical functions relevant for physicists							
Unit No. Unit Title								
Unit I	Vectors and Vector Spaces	6						
electrodynamics. Line transformation, dual sp	ient, Divergence and Curl in curvilinear coordinates applications to Classical mechanics and car independence, bases, orthogonality and completeness, linear operators, change of bas paces							
Unit II	Matrices	5						
	iagonalization, eigenvalues and eigenvectors, orthogonal and unitary matrices	1 -						
Unit III	Partial Differential Equations and Complex analysis: partial differential equations, using separation of	8 variables:						
	tegral formula, branch points and branch cuts, multi valued functions, residue theorem, al an's lemma, Taylor and Laurent series, Singularities and convergence, Conformal mapping							
	Fourier Series	-						
functions in a series of	thogonality of sine and cosine functions, Dirichlet Conditions (Statement only). Expansion of sine and cosine functions and determination of Fourier coefficients. Even and odd functions pplications of Fourier series.							
Unit V	Special Functions	11						
Rodrigues Formula, C Legendre Polynomials	and Bessel, Hermite and Laguerre Differential Equations. Properties of Legendre Generating Function, Orthogonality. Simple recurrence relations. Expansion of function is. Bessel Functions of the First Kind: Generating Function, simple recurrence relations. Zet 1(x)) and Orthogonality. Dirac delta function, definitions and different representations of del 1.H K Dass and Dr Rama Verma, Mathematical Physics, S Chand	n a series of cos of Bessel

octahedral geometry.

Specialization in Chemistry

CY3306	Title: Co-ordination Chemistry	LTPC 3003					
Version No.	1.0						
Course Prerequisites	Nil						
Objectives	bjectives In chemistry coordination or metal complex consist of an atom or ion (usually metallic) and a surrounding array of bound molecule or anions known as ligands.						
Expected Outcome	Coordination compound has been studied extensively because Ofwhat they reveal about molecule structure & chemical bonding.						
Unit No.	Unit Title	No. of hours (per Unit)					
Unit I	7						
Unit I Coordination Chemistry 7 Werner's theory, valence bond theory (inner and outer orbital complexes), electro neutrality principle and back bonding. Crystal field theory, measurement of 10 Dq (Δ o), CFSE in weak and strong fields, pairing energies, factors affecting the magnitude of 10 Dq (Δ o, Δ t). Octahedral vs. tetrahedral coordination, tetragonal distortions from							

Unit II Stereochemistry & Nomenclature 7

Jahn-Teller theorem, square planar geometry. Qualitative aspect of Ligand field and MO Theory.IUPAC nomenclature of coordination compounds, isomerism in coordination compounds. Stereochemistry of complexes with 4 and 6 coordination numbers. Chelate effect, polynuclear complexes, Labile and inert complexes.

Unit III Transition Elements 6
General group trends with special reference to electronic configuration, colour, variable valency, magnetic and

catalytic properties, and ability to form complexes.

Unit IV

Oxidation states of Transition elements

7

Stability of various oxidation states and e.m.f. (Latimer &Bosworth diagrams). Difference between the first, second and third transition series. Chemistry of Ti, V, Cr Mn, Fe and Co in various oxidation states (excluding their metallurgy).

Unit V Lanthanoids and Actinoids 8

Electronic configuration, oxidation states, colour, spectral and magnetic properties lanthanide contraction, separation of lanthanides (ion-exchange method only).

Version No.	1.0	
Course Prerequisites		
Objectives	To prepare the inorganic and organic compounds by various methods.	
Expected Outcome	Student will learn synthesis of different compounds	
Exp No	Experiment Title	

- 1. Quantitative Analysis: Estimation of copper as CuSCN
- 2.Inorganic Preparations
- (i) Tetraammine Copper (II) Sulphate, [Cu(NH3)4]SO4 H2O
- (ii) Potassium trisoxalatochromate (III), K3[Cr(C2O4)3]
- 3. Systematic analysis of extra elements in the given unknown compounds
- 4. Tests for following functional groups and unsaturation
- 5. Qualitative analysis of the following types of unknown organic compounds

Carboxylic acids

Phenols

Alcohols

Aldehydes

Ketones

Esters

6.Determination of pK (indicator) for Phenolphthalein or Methyl red.

Specialization in Mathematics

MA3306	Title: Real Analysis	LTPC 3204
Version No.	1.0	3 2 0 4
Course Prerequisites	Nil	
Objectives	To impart the knowledge of real numbers and functions.	
Expected Outcome	Students will be able to describe the real line as a complete and will be able to Use the definitions of convergence	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Countability	8
Interior points, Limit points	mbers, Completeness property in R, Countable and uncountable sets, Ness, Open and closed sets, Derived sets, Dense sets, Perfect sets, Bolzano-	Weierstrass theorem
Unit II	Sequence , Sequence and its convergence (basic idea), Subsequences, Bounded an	8
convergence, Uniform con-	uences, Cauchy's theorems on limit, Cauchy sequence, Cauchy's general vergence of sequences of functions, Weierstrass M-test.	al principle of
Unit III	Infinite series	8
condensation test, Alternati series of functions.	ries, Comparison test, ratio test, root test, Raabe's test, Logarithmic ratio ing series, Leibnitz test, Absolute and conditional convergence, Uniform	n convergence of
Unit IV	Continuity and Differentiability	6
Differentiability, Mean val	roperties of continuous Functions, Types of discontinuities, Uniform Coue theorems, Taylor's theorem with various forms of remainders.	ontinuity,
Unit V	Riemann integral	
		6
Mean value theorems of int	ility of continuous and monotonic functions, Fundamental theorem of integral calculus, Improper integrals and their convergence.	
Mean value theorems of int Text Books

Course Outcome for MA3306

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None (Use , for more than One)
CO1	Students will learn about the countable set and properties of countable set .	2	Emp
CO2	Students will learn about sequence and theorem based on sequence.	3	S
CO3	In this students will learn about convergence of positive term series and absolute term series .	3	S
CO4	In this students will learn about concept of continuity and differentiability .	3	Enp
CO5	Students will learn about rehman integrals and proof of theorems based on Rehman integrals .	3	None

SEMESTER 4

		LTPC								
PH3406	Title: Thermal Physics	3 0 0 3								
Version No.	1.0									
Course Prerequisites	Nil									
Objectives	The course will serve as an introduction to Thermodynamics and Kinetic theory									
Expected Outcome	Students will have general background in thermodynamics									
Unit No.	Unit Title	No. of hours (per Unit)								
Unit I	Zeroth and First Law of Thermodynamics	8								
form, Internal Energ	ature, Concept of Work & Heat, State Functions, First Law of Thermodynamics a y, First Law and various processes, Applications of First Law: General Relation bet sothermal and Adiabatic Processes, Compressibility and Expansion Co-efficient.									
~	rersible process with examples. Conversion of Work into Heat and Heat into Wo									
Kelvin-Planck and	not engine & efficiency. Refrigerator & coefficient of performance, 2nd Law of Clausius Statements and their Equivalence. Carnot's Theorem. Applications of hermodynamic Scale of Temperature and its Equivalence to Perfect Gas Scale.									
Unit III	Entropy	7								
Entropy of a perfect examples. Entropy of	, Clausius Theorem. Clausius Inequality, Second Law of Thermodynamics in t gas. Principle of Increase of Entropy. Entropy Changes in Reversible and Irreversible of the Universe. Entropy Changes in Reversible and Irreversible Processes. Principle—Entropy diagrams for Carnot's Cycle. Third Law of Thermodynamics. Unattaina	ole processes with ple of Increase of								
Unit IV	Thermodynamic Potentials	6								
Properties and Appl	entials: Internal Energy, Enthalpy, Helmholtz Free Energy, Gibb's Free Energy. I ications. Magnetic Work, Cooling due to adiabatic demagnetization, First and seemples, ClausiusClapeyron Equation and Ehrenfest equations.									
Unit V	Maxwell's Thermodynamic Relations	6								
	rell's thermodynamic Relations and their applications, Maxwell's Relations: (1) C	lausiusClapeyron								
equation, (2) Value of	of C_p - C_v , (3) Tds Equations, (4) Energy equations.									
Text Books 1. Thermal Physics, S. Garg, R. Bansal and Ghosh, 2nd Edition, Tata McGraw-Hill

CY3406	Title: Basics and Hydrocarbons	LTPC 3003
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To provide knowledge about synthesis of organic compounds	
Expected Outcome	Learning preparation and reaction chemistry of aliphatic and aromatic phenols, ethers and carbonyl compounds	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Basics of Hydrocarbon	8
on bond properties. Electric hyperconjugation and their and Heterolytic fission with		mesomeric effects, trength. Homolytic
Unit II	Steriochemistry	8
cis-trans and, syn-anti isomo Chirality/Asymmetry, Enant	nn and Sawhorse Projection formulae and their inter conversions, Georerism E/Z notations with C.I.Prules.Optical Isomerism: Optical Activity tiomers, Molecules with two or more chiral-centres, Distereoisomers, motion. Relative and absolute configuration: D/L and R/S designations	, Specific Rotation,
Unit III	Chemistry of Aliphatic Hydrocarbon	10
eliminations. Reactions of		
addition), Unit IV	Cycloalkanes &Conformational analysis	6
Types of cycloalkanes and	their relative stability, Baeyer strain theory, Conformation analysis of cyclohexane: Chair, Boat and Twist boat forms; Relative stability with	ofalkanes: Relative
Unit V	Aromatic Hydrocarbon	6
with suitable examples. Ele	aromatic character of arenes, cyclic carbocations/carbanionsandheter ectrophilic aromatic substitution:halogenation, nitration, sulphonation eirmechanism. Directing effects of the groups.

PH3440	Title: Thermal Physics lab	LTPC 0021
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To provide the knowledge of experiments related to thermal physics	
Expected Outcome	Students will be able to evaluate thermal properties of materials	

At least 5 experiments from the following

- 1. To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow method.
- 2. To determine the Coefficient of Thermal Conductivity of Cu by Searle's Apparatus.
- 3. To determine the Coefficient of Thermal Conductivity of Cu by Angstrom's Method.
- 4. To determine the Coefficient of Thermal Conductivity of a bad conductor by Lee and Charlton's disc method.
- 5. To determine the Temperature Coefficient of Resistance by Platinum Resistance Thermometer (PRT).
- 6. To study the variation of Thermo-Emf of a Thermocouple with Difference of Temperature of its Two Junctions.
- 7. To calibrate a thermocouple to measure temperature in a specified Range using
 (1) Null Method, (2) Direct measurement using Op-Amp difference amplifier and to determine Neutral Temperature.

PH3441	Title :Quantum Mechanics Lab	LTPC 0 0 2 1
Version No.	1.1	
Course Prerequisites	Nil	
Objectives	Use C/C++/Scilab for solving the following problems based on Quantum Mechanics	
Expected Outcome	The students will be able to use Scilab with the exposure in computational programming in the computer lab, the student will be in a position to solve Schrodinger equation for ground state energy and wave functions of various simple quantum mechanical one dimensional and three dimensional potentials.	
1.	C/C++/Scilab for solving the following problems based on Quantum Mechanics like Solve the s-wave Schrodinger equation for the ground state and the first excited state of hydrogen atom:	f the
	$\frac{d^2y}{dr^2} = A(r)u(r), A(r) = \frac{2m}{h^2} [V(r) - E] \text{ where } V(r) = -\frac{\sigma^2}{r}$	

Here, m is the reduced mass of the electron. Obtain the energy eigenvalues and plot the corresponding wavefunctions. Remember that the ground state energy of the hydrogen atom is \approx -13.6 eV. Take e = 3.795 (eVÅ)^{1/2}, hc = 1973 (eVÅ) and m = 0.511x10⁶ eV/c².

2. Solve the s-wave radial Schrodinger equation for an atom:

$$\tfrac{d^2y}{dr^2} = A(r)u(r), A(r) = \tfrac{2m}{\hbar^2} \left[V(r) - E\right]$$

where m is the reduced mass of the system (which can be chosen to be the mass of an electron), for the screened coulomb potential $V(r)=-\frac{e^2}{r}e^{-r/a}$

Find the energy (in eV) of the ground state of the atom to an accuracy of three significant digits. Also, plot the corresponding wavefunction. Take $e = 3.795 \text{ (eVÅ)}^{1/2}$, $m = 0.511x10^6 \text{ eV/c}^2$, and a = 3 Å, 5 Å, 7 Å. In these units hc = 1973 (eVÅ). The ground state energy is expected to be above -12 eV in all three cases.

3. Solve the s-wave radial Schrodinger equation for a particle of mass m:

$$\frac{d^2y}{dr^2} = A(r)u(r), A(r) = \frac{2m}{\hbar^2} [V(r) - E]$$

For the anharmonic oscillator potential $V(r) = \frac{1}{2}kr^2 + \frac{1}{3}br^3$

for the ground state energy (in MeV) of particle to an accuracy of three significant digits. Also, plot the corresponding wave function. Choose m = 940 MeV/c², k = 100MeV fm⁻², b = 0, 10, 30 MeV fm⁻³ In these units, ch = 197.3 MeV fm. The ground state energy I expected to lie between 90 and 110 MeV for all three cases.

5. Solve the s-wave radial Schrodinger equation for the vibrations of hydrogen molecule:

$$\frac{d^2y}{dr^2} = A(r)u(r), A(r) = \frac{2\mu}{\hbar^2} [V(r) - E]$$
 Where μ is the reduced mass of the two-atom system for the Morse potential $V(r) = D\left(e^{-2\alpha r'} - e^{-\alpha r'}\right), r' = \frac{r - r_0}{r}$

Find the lowest vibrational energy (in MeV) of the molecule to an accuracy of three significant digits. Also plot the corresponding wave function. Take: $m = 940 \times 10^6 \, \mathrm{eV/C^2}$, $D = 0.755501 \, \mathrm{eV}$, $\alpha = 1.44$, $r_0 = 0.131349 \, \mathrm{\mathring{A}}$

Laboratory based experiments:

- 5. Study of Electron spin resonance- determine magnetic field as a function of the resonance frequency
- 6. Study of Zeeman effect: with external magnetic field; Hyperfine splitting
- 7. To show the tunneling effect in tunnel diode using I-V characteristics.
- 8. Quantum efficiency of CCDs

Course Outcome for PH3441

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None(Use , for more than One)
CO1	Students will be exposed to various modern scientific experiments that establish quantum mechanics.	1	Em
CO2	The experiments using Sci-lab will enable the student to appreciate nuances involved in theory.	2	S
CO3	In the laboratory course, with the exposure in computational programming in the computer lab, students will be able to diagonalize matrices and calculate eigenvalues and eigenvectors.	3	S

Specialization in Chemistry

CY3407	Title: Electrochemistry	LTPC 3003
Version No.	1.0	
Course Prerequisites		
Objectives	To provide students with basic electrochemical process under standard &non standard conditions.	
Expected Outcome	To make the quantitative predictions about whether equilibrium favour products or reactant in a redox reaction.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Conductance	8

Arrhenius theory of electrolytic dissociation. Conductivity, equivalent and molar conductivityand their variation with dilution for weak and strong electrolytes. Molar conductivity atinfinite dilution. Kohlrausch law of independent migration of ions.

Unit II Effect of conductance 8

Ionic velocities, mobilities and their determinations, transference numbers and their relationto ionic mobilities, determination of transference numbers using Hittorf and MovingBoundary methods. Applications of conductance measurement: (i) degree of dissociation ofweak electrolytes, (ii) ionic product of water (iii) solubility and solubility product ofsparingly soluble salts, (iv) hydrolysis constants of salts.

Unit III Electrochemistry 7

Quantitative aspects of Faraday's laws of electrolysis, rules of oxidation/reduction of ionsbased on half-cell potentials, applications of electrolysis in metallurgy and industry. Chemical cells, reversible and irreversible cells with examples. Electromotive force of a celland its measurement, Nernst equation; Standard electrode (reduction) potential and itsapplication to different kinds of half-cells.

Unit IV Determination Of Cell Coefficients 8

(i) free energy, enthalpy and entropy of a cell reaction, (ii) equilibrium constants, and (iii) pH-values, using hydrogen, quinone-hydroquinone, glass and SbO/Sb2O3 electrodes. Concentration cells with and without transference, liquid junction potential; determination ofactivity coefficients and transference numbers. Qualitative discussion of potentiometric titrations (acid-base, redox, precipitation).

Unit V Electrical & Magnetic Properties of Atoms and Molecules 6

Basic ideas of electrostatics, Electrostatics of dielectric media, Clausius-Mosotti equation, Dipole moment and molecular polarizabilities and theirmeasurements. Diamagnetism, paramagnetism, magnetic susceptibility and its measurement, molecular interpretation.

CY3440	Title: Basics of Hydrocarbon Lab	LTPC 0021
Version No.	1.0	
Course Prerequisites		
Objectives	To Determine melting points of different organic compounds using experimental methods	
Expected Outcome	Imparting skills in handling instruments and chemicals in Suitable manner.	
Exp No	Experiment Title	

- 1. Checking the calibration of the thermometer
- 2. Purification of organic compounds by crystallization using the following solvents:
- a. Water
- b. Alcohol
- c. Alcohol-Water
- 3. Chromatography. Separation of a mixture of two amino acids by ascending and horizontal paper chromatography
- 4. Separation of a mixture of two sugars by ascending paper chromatography
- 5. Separation of a mixture of o- and p-nitrophenol or o- and p-aminophenolby thin layer chromatography (TLC)
- 6.Potentiometric titration of Mohr's salt with potassium dichromate
- 7.To determine Electrical Conductivity of aqueous solutions

Specialization in Physics

PH3501	Title: Mathematical Physics II	LTPC 3 2 0 3
Version No.	1.0	3 2 03
Course Prerequisites	MA3107, MA3207	
Objectives	Students will learn the Fourier analysis of periodic functions, special functions and their applications in various physical problems. Additionally students will acquire knowledge of the basic theory of errors, their analysis, methods to solve partial differential equations with examples	
Expected Outcome	The student will be able to solve ODE, PDE's which model physicalphenomena. He / she shall develop an understanding of how to model a given physical phenomena and this will help in understanding the behavior of the model systems	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	FourierSeries	10
periodic functions representation of Fo aninterval. Even an	Orthogonality of sine and cosine functions, DirichletConditions (Statement only) in a series of sine and cosine functions and determination of Fourier coeffic urierseries. Expansion of functions with arbitrary period. Expansion of non-periodic dodd functions and their Fourier expansions. Application. Summing of InfiniteSe and integration of Fourier Series. Parseval Identity.	cients. Complex c functions over

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None(Use , for more than One)
CO1	Students will be able to understand Maxwell's equations, role of displacement current, gauge transformations, scalar and vector potentials, Coulomb and Lorentz gauge, boundary conditions at the interface between different media.	2	S
CO2	Students will be able to analyse the phenomena of wave propagation in the unbounded, bounded, vacuum, dielectric, guided and unguided media.	2	S
CO3	Students will be able to understand the laws of reflection and refraction and to calculate the reflection and transmission coefficients at plane interface in bounded media	3	S
CO4	Students will be able to understand the linear, circular and elliptical polarizations of em waves, propagation of em waves in anisotropic media, the concept of optical rotation, theories of optical rotation and their experimental rotation, calculation of angle rotation and specific rotation.	2	S
CO5	Students will be able to understand the features of planar optical wave guide and obtain the Electric field components, Eigen value equations, phase and group velocities in a dielectric wave guide.	2	S

PH3540	Title :Mathematical Physics II Lab	LTPC 0021
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	Students will learn the basics of the Scilab software and apply it to curve fittings, in solving system of linear equations, generating and plotting special functions such as Legendre polynomial and Bessel functions, solving first and second order ordinary and partial differential equations.	
Expected Outcome	Students will be able to use Scilab for curve fittings, in solving system of linear equations, generating and plotting special functions such as Legendre polynomial and Bessel functions and solving first and second order ordinary and partial differential equations.	
	List of Experiments	

Introduction to Numerical computation software Scilab Introduction to Scilab, Advantages and disadvantages, Scilab environment, Command window, Figure window, Edit window, Variables and arrays, Initialising variables in Scilab, Multidimensional arrays, Subarray, Special values, Displaying output data, data file, Scalar and array operations, Hierarchy of operations, Built in Scilab functions, Introduction to plotting, 2D and 3D plotting

Branching Statements and program design, Relational & logical operators, the while loop, for loop, details of loop operations, break & continue statements, nested loops, logical arrays and vectorization

User defined functions, Introduction to Scilab functions, Variable passing in Scilab, optional arguments, preserving data between calls to a function, Complex and Character data, string function, Multidimensional arrays

an introduction to Scilab file processing, file opening and closing, Binary I/o functions, comparing binary and formatted functions, Numerical methods and developing the skills of writing a program.

Curve fitting, Least square fit, Goodness of fit, standard deviation	Ohm's law to calculate R , Hooke's Law to calculate spring constant.
Solution of linear system of equations by gauss elimination method and gauss seidal method. Diagonalization of matrices ,Inverse of a matrix, Eigen values problems.	Solution of mesh equations of of electric circuits (3 meshes) Solution of coupled sprig mass systems (3 masses).
Generation of Special functions using User defined functions in scilab.	Generating and plotting Legendre Polynomials. Generating and plotting Bessel function.

Course Prerequisites	Nil	
Objectives	Students will learn through experiments the physics of different types of material like magnetic materials, dielectricmaterials, metals and their properties.	
Expected Outcome	Students will be able tocarry out experiments based on the theory that they have learned to measure themagnetic susceptibility, dielectric constant, trace hysteresis loop. They will also employ to four probe methods to measure electrical conductivity and the hall set up to determine the hall coefficient of a semiconductor.	

- 1. Measurement of susceptibility of paramagnetic solution (Quinck's Tube Method)
- 2. To measure the Magnetic susceptibility of Solids.
- 3. To determine the Coupling Coefficient of a Piezoelectric crystal.
- 4. To measure the Dielectric Constant of a dielectric Materials with frequency.
- 5. To determine the complex dielectric constant and plasma frequency of metal using Surface Plasmon resonance (SPR) technique.
- 6. To determine the refractive index of a dielectric using SPR technique.
- 7. To study the PE Hysteresis loop of a Ferroelectric Crystal.
- 8. To draw the BH curve of Fe using Solenoid & determine energy loss from Hysteresis.
- 9. To measure the resistivity of a semiconductor (Ge) with temperature (up to 150°C) by four-probe method and to determine its band gap.
- 10. To determine the Hall coefficient of a semiconductor sample.

PH3542	Title: Advanced Electromagnetic Theory Lab	LTPC 0021
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To provide the knowledge of experiments related to electromagnetism including polarization related experiments	
Expected Outcome	Students will be able to evaluate and understand properties of materials and interaction of polarized light with materials using electromagnetism based experiments	

- 1. To verify the law of Malus for plane polarized light.
- 2. To determine the specific rotation of sugar solution using Polarimeter.
- 3. To analyze elliptically polarized Light by using a Babinet's compensator.
- 4. To study dependence of radiation on angle for a simple Dipole antenna.
- 5. To determine the wavelength and velocity of ultrasonic waves in a liquid (Kerosene Oil, Xylene, etc.) by studying the diffraction through ultrasonic grating.
- 6. To study the reflection, refraction of microwaves
- 7. To study Polarization and double slit interference in microwaves.
- 8. To determine the refractive index of liquid by total internal reflection using Wollaston's air-film.
- 9. To determine the refractive Index of (1) glass and (2) a liquid by total internal reflection using a Gaussian eyepiece.
- 10. To study the polarization of light by reflection and determine the polarizing angle for air-glass interface.
- 11. To verify the Stefan's law of radiation and to determine Stefan's constant.
- 12. To determine Boltzmann constant using V-I characteristics of PN junction diode.

PH3511	Title: Digital Systems and Its Applications	LTPC 4004					
Version No.	1.0						
Course Prerequisites	EC3101 Students will learn the basics of IC and digital circuits, and difference						
Objectives							
Expected Outcome							
Unit No.	Init No. Unit Title						
Unit I	Introduction to CRO Integrated Circuits (Qualitative treatment only)	(per Unit) 8					
CRO: (1) Study of Passive components MSI, LSI and VLSI	CRO. Electron Gun, Deflection System and Time Base. Deflection Sensitivity. Waveform, (2) Measurement of Voltage, Current, Frequency, and Phase Difference of Discrete components. Wafer. Chip. Advantages and drawbacks of ICs. Scale of (basic idea and definitions only). Classification of ICs. Examples of Linear and Discrete Components.	ence. Active and integration: SSI,					
Unit II	Digital Circuits	7					
Conversion. BCD,	n Analog and Digital Circuits. Binary Numbers. Decimal to Binary and Bin Octal and Hexadecimal numbers. AND, OR and NOT Gates (realization us and NOR Gates as Universal Gates. XOR and XNOR Gates and application as Par	sing Diodes and					
Unit III	Boolean Algebra	7					
Products. Idea of M	ems. Boolean Laws. Simplification of Logic Circuit using Boolean Algebra. Fundinterms and Maxterms. Conversion of Truth table into Equivalent Logic Circuid (2) Karnaugh Map.						
Unit IV	Intel 8085 Microprocessor Architecture	7					
	085. Block diagram. Components. Pin-out diagram. Buses. Registers. ALU. d Control circuitry. Timing states. Instruction cycle, Timing diagram of MOV and						
Unit V	Sequential Circuits &Timers & Shift Registers	7					
SR, D, and JK Flip-	-Flops. Clocked (Level and Edge Triggered) Flip-Flops. Preset and Clear operation	ons. Race-around					
_	lip-Flop. M/S JK Flip-Flop.IC 555: block diagram and applications: Astablen						
	brator.Serial-in-Serial-out, Serial-in-Parallel-out, Parallel-in-Serial-out and Parall						
Wionostable multivi		or in randinor out					
Shift Registers (only		or in runanor out					

Bachelor of Sciences (Hons) (PCM) V-2019

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None(Use , for more than One)
CO1	Student is expected to be conversant with the Basic working of an oscilloscope including its different components and to employ the same to study different wave forms and to measure voltage, current, frequency and phase.	2	S
CO2	Students will secure first-hand idea of different components including both active and passive components to gain a insight into circuits using discrete components and also to learn about integrated circuits.	3	S
CO3	Students will learn about analog systems and digital systems and their differences, fundamental logic gates, combinational as well as sequential and number systems. Synthesis of Boolean functions, simplification and construction of digital circuits by employing Boolean algebra.	2	S
CO4	Students will be able to understand the sequential systems by choosing FlipFlop as a building bock- construct multivibrators, counters to provide a basic idea about memory including RAM,ROM and also about memory organization.	2	S
CO5	Students will be able to understando the microprocessor and assembly language programming with special reference to IntelµP8085.	3	S

PH3512	Title: Applications of Quantum Mechanics	LTPC 4004					
Version No.	1.0						
Course Prerequisites	PH3407						
Objectives	Students will learn the formalism in Quantum mechanics and applications such as Time independent and time dependent perturbation theory, scattering, WKB approximation and Tunneling						
Expected Outcome	A student will have the knowledge of scope of quantum mechanics calculations and how to apply it to some important quantum systems						
Unit No.	Unit Title	No. of hours (per Unit)					
Unit I	Formalism in Quantum Mechanics	10					
	servables, Eigenfunctions of a Hermitian operator, generalized statistical interpreta, Dirac Notation. Identical systems-Two particle systems, indistinguishability in quand fermions						
Unit II	Time Independent perturbation theory	9					
Non degenerate pert Effect. Hyperfine sp	urbation theory. degenerate perturbation theory. The fine structure if Hydrogen. Th litting	e Zeeman					
Unit III	Variational principle and WKB approximation	7					
Ground state of Heli	um, Hydrogen molecule ion. Classical region. Tunneling						
Unit IV	Time dependent perturbation theory	7					
Two level systems, theorem and Berry p	emission and absorption of radius, Spontaneous emission, Adiabatic Approximase	nation: Adiabatic					
Unit V	Scattering and other special cases	8					
Introduction, Partial Schrodinger's Cat	wave analysis, phase shifts, The Born Approximation, The EPR paradox, Bell'sthe	eorem.					
Text Books	D.J. Griffith, Introduction to Quantum Mechanics, Pearson Education

PH3513	Title: Astronomy and Astrophysics	LTPC 4004				
Version No.	1.0					
Course Prerequisites	Nil					
Objectives	Students will learn the basic parameters for describing the properties of starsand making experimental measurements, their interpretation and role in understanding of astrophysical phenomenon. Study of solar and stellar spectra and acquire basic knowledge of Milky Way and Galaxies, their properties and structure.					
Expected Outcome	Students will develop skills for understanding basics of large scale structures and expanding universeand be aware of astronomical instruments to perform observations related to the positional astronomy measurement.					
Unit No.	Unit Title	No. of hours (per Unit)				
Unit I	Astronomical Scales, Basic concepts of positional astronomy:					

Astronomical Scales: Astronomical Distance, Mass and Time, Scales, Brightness, Radiant Fluxand Luminosity, Measurement of Astronomical Quantities Astronomical Distances, Stellar Radii, Masses of Stars, Stellar Temperature.

Basic concepts of positional astronomy: Celestial Sphere, Geometry of a Sphere, Spherical Triangle, Astronomical Coordinate Systems, Geographical Coordinate Systems, Horizon System, Equatorial System, Diurnal Motion of the Stars, Conversion of Coordinates. Measurement of Time, Sidereal Time, Apparent Solar Time, Mean Solar Time, Equation of Time, Calendar. Basic Parameters of Stars: Determination of Distance by Parallax Method; Brightness, Radiant Flux and Luminosity, Apparent and Absolute magnitude scale, Distance Modulus; Determination of Temperature and Radius of a star; Determination of Masses from Binary orbits; Stellar Spectral Classification, Hertzsprung-Russell Diagram.

Unit II Astronomical techniques and Physical Principles 6

Astronomical techniques: Basic Optical Definitions for Astronomy (MagnificationLightGathering Power, Resolving Power and Diffraction Limit, Atmospheric Windows), OpticalTelescopes (Types of Reflecting Telescopes, Telescope Mountings, Space Telescopes, Detectors and their Use with Telescopes (Types of Detectors, detection Limits with Telescopes).

Physical principles: Gravitation in Astrophysics (Virial Theorem, Newton versus Einstein), Systems in Thermodynamic Equilibrium.

Unit III The sun, Stellar spectra and classification Structure 8

The sun (Solar Parameters, Solar Photosphere, Solar Atmosphere, Chromosphere. Corona, Solar Activity, Basics of Solar Magneto-hydrodynamics. Helioseismology). **The solar family** (Solar System: Facts and Figures, Origin of the Solar System: The Nebular Model, Tidal Forces and Planetary Rings, Extra-Solar Planets.

Stellar spectra and classification Structure (Atomic Spectra Revisited, Stellar Spectra, Spectra Types and Their Temperature Dependence, Black Body Approximation, H R Diagram, Luminosity Classification)

Unit IV The milky way 10

The milky way: Basic Structure and Properties of the Milky Way, Nature of Rotation ofthe Milky Way (Differential Rotation of the Galaxy and Oort Constant, Rotation Curve of the Galaxy and the Dark Matter, Nature of the Spiral Arms), Stars and Star Clusters of the MilkyWay, Properties of and around the Galactic Nucleus.

Unit V Galaxies, Large scale structure & expanding universe: 12

Galaxies: Galaxy Morphology, Hubble's Classification of Galaxies, Elliptical Galaxies (TheIntrinsic Shapes of Elliptical, de Vaucouleurs Law, Stars and Gas). Spiral and LenticularGalaxies (Bulges, Disks, Galactic Halo) The Milky Way Galaxy, Gas and Dust in the Galaxy, Spiral Arms.

Large scale structure & expanding universe: Cosmic Distance Ladder (An Example fromTerrestrial Physics, Distance Measurement using Cepheid Variables), Hubble's Law (Distance-Velocity Relation), Clusters of Galaxies (Virial theorem and Dark Matter).

	Business (Figure 2017)

PH3514	Title: Nuclear and Particle Physics	LTPC 4004
Version No.	1.0	
Course Prerequisites	РН3306	
Objectives	To understand Skills to describe and explain the properties of nuclei and derive them from various models of nuclear structure and particle Physics	
Expected Outcome	Students will gain knowledge to understand, explain and derive the various theoretical formulation of nuclear physics and will develop basic understanding of nuclear reactions and decays with help of theoretical formulae.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	General Properties of Nuclei and Nuclear Models:	16

General Properties of Nuclei: Constituents of nucleus and their Intrinsic properties, quantitative facts about mass, radii, charge density (matter density), binding energy, average binding energy and its variation with mass number, main features of binding energy versus mass number curve, N/A plot, angular momentum, parity, magnetic moment, electric moments, nuclear excites states.

Nuclear Models: Liquid drop model approach, semi empirical mass formula and significance offits various terms, condition of nuclear stability, two nucleon separation energies, Fermi gas model (degenerate fermions gas, nuclear symmetry potential in Fermi gas), evidence for nuclear shell structure, nuclear magic numbers, basic assumption of shell model, concept of mean field, residual interaction, concept of nuclear force.

Unit II Radioactivity decay and Nuclear Reactions: 12

Radioactivity decay: (a) Alpha decay: basics of α -decay processes, theory of α -emission, Gamow factor, Geiger Nuttall law, α -decay spectroscopy. (b) β -decay: energy kinematics for β -decay, positron emission, electron capture, neutrino hypothesis. (c) Gamma decay: Gamma rayemission& kinematics, internal conversion.

Nuclear Reactions: Types of Reactions, Conservation Laws, kinematics of reactions, Q-value, reaction rate, reaction cross section, Concept of compound and direct Reaction, resonancereaction, Coulomb scattering (Rutherford scattering).

Unit III Interaction of Nuclear Radiation with matter: 5

Interaction of Nuclear Radiation with matter: Energy loss due to ionization (Bethe-Block formula), energy loss of electrons, Cerenkov radiation. Gamma ray interaction through matter, photoelectric effect, Compton scattering, pair production, neutron interaction with matter.

Unit IV Detector for Nuclear Radiations: 5

Detector for Nuclear Radiations: Gas detectors: estimation of electric field, mobility of particle, for ionization chamber and GM Counter. Basic principle of Scintillation Detectors and construction of photo-multiplier tube(PMT). Semiconductor Detectors (Si and Ge) for charge particle and photon detection (concept of charge carrier and mobility), neutron detector.

Unit V Particle Accelerators and Particle physics: 10

Particle Accelerators: Accelerator facility available in India: Van-de Graaff Generator (Tandem accelerator), Linear accelerator, Cyclotron, Synchrotrons.

Particle physics: Particle interactions; basic features, types of particles and its families. Symmetries and Conservation Laws: energy and momentum, angular momentum, parity, baryon number, Lepton number, Isospin, Strangeness and charm, concept of quarkmodel, color quantum number and gluons.

Specialization in Chemistry

CY3501	Title: Organometallic Chemistry	LTPC 3104
Version No.	1.0	
Course Prerequisites		
Objectives	The main goal of the work developed in this area is the production of high quality research in the area of organ metallic chemistry	
Expected Outcome	To give a systematic introductory treatment of organometallic Compounds emphasizing synthesis properties, structure& reactivity.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Classification of Organometallic Compounds	8

Definition and classification of Organometallic compounds on the basis of bond type. Concept of hapticity of organic ligands. Metal carbonyls: 18 electron rule, electron count of mononuclear, polynuclear and substituted metal carbonyls of 3d series.

Unit II Methods of Preparation 8

General methods of preparation (direct combination, reductivecarbonylation, thermal and photochemical decomposition) of mono and binuclear carbonyls of 3d series. Structures of mononuclear and binuclear carbonyls of Cr, Mn, Fe, Co and Niusing VBT. Acceptorbehavior of CO (MO diagram of CO to be discussed).

Unit III Metal Alkyls 8

Important structural features of methyl lithium (tetramer) and trialkylaluminium (dimer), concept of multicentre bonding in these compounds. Role oftriethylaluminium in polymerisation of ethene (Ziegler – Natta Catalyst). Species present in ether solution of Grignard reagent and their structures, Ferrocene: Preparation and reactions (acetylation, alkylation, metallation, MannichCondensation). Structure and aromaticity. Comparison of aromaticity and reactivity with that of benzene.

Unit IV Reaction Kinetics and Mechanism 8

Introduction to inorganic reaction mechanisms. Substitution reactions in square planar complexes, Trans- effect, theories of trans effect, Mechanism of nucleophilic substitution in square planar complexes, Thermodynamic and Kinetic stability, Kinetics of octahedral substitution, Ligand fieldeffects and reaction rates, Mechanism of substitution in octahedral complexes.

Unit V Catalysis by Organometallic Compounds 7

Study of the following industrial processes and their mechanism:

- 1. Alkene hydrogenation (Wilkinsons Catalyst)
- 2. Hydroformylation (Co salts)
- 3. Wacker Process
- 4. Synthetic gasoline (Fischer Tropsch reaction)
- 5. Synthesis gas by metal carbonyl complexes

CY3502	Title: Heterocyclic Chemistry	LTPC 3103				
Version No.	1.0	3 1 0 3				
Course Prerequisites						
Objectives	The major objective of present study is the rationalization of the reactivity of heteroaromatic compound.					
Expected Outcome	Heterocyclic compound continue to attract considerableInterest as they contribute to the development of society frombiological industrial and Understanding view points.					
Unit No.	Unit Title					
Unit I	Classification &Structure of heterocyclic compounds	8				
Classification and nomencl heteroatom;	lature, Structure, aromaticity in 5-numbered and 6-membered ringsc	ontaining one				
Unit II	Synthesis & mechanism of reactions	8				
Synthesis, reactions and me synthesis, Hantzsch synthesi	chanism of substitution reactions of:Furan, Pyrrole (Paal-Knorr synthesis, is)	Knorr pyrrole				
Thiophene, Pyridine (Hantz	Reaction Mechanism esch synthesis), Pyrimidine, Structure elucidation of indole, Fischer indole ture elucidation of quipeline endisequipeline. Friedlander's synthesis. I

CY3503	Title: Chemical Kinetics	LTPC 3103
Version No.	1.0	
Course Prerequisites		
Objectives	To study about the concept of reaction rates and experimental methods to determine the rate law.	
Expected Outcome	It will enhance knowledge about surface chemistry and phase eqilliberia	
Unit No.	Unit Title	No of hours (per Unit)
Unit I	Chemical Kinetics	8

Order and molecularity of a reaction, rate laws in terms of the advancement of a reaction, differential and integrated form of rate expressions up to second order reactions, experimental methods of the determination of rate laws, kinetics of complex reactions (integrated rate expressions up to first order only): (i) Opposing reactions (ii) parallel reactions and (iii) consecutive reactions and their differential rate equations (steady-state approximation in reaction mechanisms) (iv) chain reactions.

Unit II Variation Of Reaction Rates 8

Temperature dependence of reaction rates; Arrhenius equation; activation energy. Collision theory of reaction rates, Lindemann mechanism, qualitative treatment of the theory of absolute reaction rates.

Unit III Concept of Catalysis & Surface chemistry 8

Types of catalyst, specificity and selectivity, mechanisms of catalyzed reactions at solid surfaces; effect of particle size and efficiency of nanoparticles as catalysts. Enzyme catalysis, Michaelis-Menten mechanism, acid-base catalysis. Physical adsorption, chemisorptions, adsorption isotherms. Nature of adsorbed state.

Unit IV Phase Equilibria 9

Concept of phases, components and degrees of freedom, derivation of Gibbs Phase Rule for nonreactive and reactive systems; Clausius-Clapeyron equation and its applications to solid liquid, liquid-vapour and solid-vapour equilibrium, phase diagram for one component systems, with applications. Phase diagrams for systems of solid-liquid equilibria involving eutectic, congruent and incongruent melting points, solid solutions.

Unit V Binary solutions 8

Gibbs-Duhem-Margules equation, its derivation and applications to fractional distillation of binary miscible liquids (ideal and nonideal), azeotropes, lever rule, partial miscibility of liquids, CST, miscible pairs, steam distillation.Nernst distribution law: its derivation and applications.

CY3517	Title: Environmental Chemistry	L T P C 4 0 0 4
Version No.	1.0	
Course Prerequisites		
Objectives	Environmental chemistry scientific study of the chemical and biochemical phenomena that occour in natural places	
Expected Outcome	To study the environmental behaviour of natural and anthropogenic chemic or various types of pollutions.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Fundamentals of Environmental Chemistry	8

Atomic structure, electronic configuration, periodic properties of elements (ionization potential, electron affinity and electronegativity), types of chemical bonds (ionic, covalent, coordinate and hydrogen bonds); mole concept, molarity and normality, quantitative volumetric analysis. Thermodynamic system; types of chemical reactions; acids, bases and salts, solubility products; solutes and solvents; redox reactions, concepts of pH and pE, electrochemistry, Nernst equation, electrochemical cells.

Unit II Basic Concepts of Organic Environmental Chemistry 8

Basic concepts of organic chemistry, hydrocarbons, aliphatic and aromatic compounds, organic functional groups, polarity of the functional groups, synthesis of xenobiotic compounds like pesticides and dyes, synthetic polymers.

Unit III Atmospheric Chemistry 10

Composition of atmosphere; photochemical reactions in atmosphere; smog formation, types of smog (sulphur smog and photochemical smog), aerosols; chemistry of acid rain, case studies; reactions of NO_2 and SO_2 ; free radicals and ozone layer depletion, role of CFCs in ozone depletion

Unit IV Water Chemistry

Chemical and physical properties of water; alkalinity and acidity of water, hardness of water, calculation of total hardness; solubility of metals, complex formation and chelation; colloidal particles; heavy metals in water.

Unit V Soil chemistry 8

Soil composition; relation between organic carbon and organic matter, inorganic and organic components in soil; soil humus; cation and anion exchange reactions in soil; nitrogen, phosphorus and potassium in soil; phenolic compounds in soil.

Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Industrial Gases and Inorganic Chemicals	7

Industrial Gases: Large scale production uses storage and hazards in handling of the following gases: Oxygen, Nitrogen, Argon, Neon, Helium, Hydrogen, Acetylene, Carbon monoxide, Chlorine, Fluorine, Sulphur dioxide and phosgene.

Inorganic Chemicals: Manufacture, application, analysis and hazards in handling the following chemicals: Hydrochloric acid, Nitric acid, sulphuric acid, caustic soda, common salt,borax, bleaching powder, sodium thiosulphate,hydrogen peroxide, potash alum,chromealum, potassium dichromate and potassium permanganate.

Unit II	Industrial Metallurgy	8					
Preparation of metals (ferrous and nonferrous) and ultrapure metals for semiconductortechnology							
Unit III	Environment and its segments	8					

Ecosystems. Biogeochemical cycles of carbon, nitrogen and sulphur.Air Pollution: Major regions of atmosphere. Chemical and photochemical reactions inatmosphere. Air pollutants: types, sources, particle size and chemical nature; Photochemicalsmog: its constituents and photochemistry. Environmental effects of ozone, Major sources of organisms and vegetation. Greenhouse effect and Globalwarming, Ozone depletion by oxides of nitrogen, chlorofluorocarbons and Halogens, removalofsulphur from coal. Control of particulates.

Water Pollution: Techniques for measuring water pollution, Impacts of waterpollution on hydrological and ecosystems. Water purification methods. Effluent treatment plants (primary, secondary and tertiarytreatment). Industrial effluents from the following industries and their treatment: electroplating, textile, tannery, dairy, petroleum and petrochemicals, agro, fertilizer, etc. Sludgedisposal. Industrial waste management, incineration of waste. Water treatment and purification (reverse osmosis, electro dialysis, ion exchange). Water quality parameters for waste water, industrial water and domestic water.

Unit IV	Energy & Environment	7							
Sources of energy: Coal, pe	Sources of energy: Coal, petrol and natural gas. Nuclear Fusion / Fission, Solar energy, Hydrogen, geothermal, Tidal								
and Hydel, etc.Nuclear Pollution: Disposal of nuclear waste, nuclear disaster and its management.									
Unit V	Biocatalysis	6							
Introduction to biocatalysis:	Importance in "Green Chemistry" and Chemical Industry								
	1. S. S. Dara: A Textbook of Engineering Chemistry, S. Chand	1 & Company I td							
Text Books	NewDelhi.	a & Company Ltd.

Specialization in Mathematics

MA3501	Title: Linear Algebra	LTP C 4 2 0 4						
Version No.	1.0							
Course Prerequisites	MA3407							
Objectives	To give an introduction to the basic concepts of Linear Algebra							
Expected Outcome	Students will be able to assess properties implied by the definitions of vector space .							
Unit No.	Unit Title	No. of hours (per Unit)						
Unit I	Linear Space	8						
Vector spaces and their elementary	properties, Subspaces, linear sum, direct sum and releted theorem							
Unit II	Bases and dimensions	8						
Linear dependence and independen	nce, and related theorems Basis and dimension.							
Unit III	Linear transformation	8						
Linear transformations and their al transformations, Change of basis	gebra, Range and null space, Rank and nullity, Matrix representation of	linear						
Unit IV	Types of Matrices	8						
matrix by elementary transformation Unit V	Eigen value and Eigen vector	8						
of a matrix, Application of matrice	ses and eigen vectors of a matrix, Cayley- Hamilton's theorem and its uses to solve a system of linear (both homogeneous and non-homogeneous Diagonalization of square matrices with distinct eigen values,							
Text Books	 Linear Algebra , Author U.S Rana , Anand Publication, Merrut. Kenneth Hoffman, Ray Alden Kunze, Linear Algebra 2nd Ed., Pr Pvt. Limited, 1971 	entice-Hall Of India

Course Outcome for MA3501

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None (Use , for more than One)
CO1	Students will be able to critically analyze and construct mathematical arguments that relate to the study of introductory linear algebra.	2	S
CO2	Students will be able to utilise visualization, spatial reasoning, as well as geometric properties and strategies to model, solve problems, and view solutions, especially in R2 and R3, as well as conceptually extend these results to higher dimensions.	3	S
CO3	Students will be able to understand the concepts linear transformation between vector spaces, discuss its matrix relative to given bases. Describe geometrically significant linear transformations of the plane to itself.	3	S
CO4	Students will be able to use computational techniques and algebraic skills essential for the study of systems of linear equations, matrix algebra, orthogonality and diagonalization.		S
CO5	Students able to understood and use characteristic polynomials to compute eigen values and eigen vectors and use eigenvectors to represent a linear transformation with respect to a particularly nice basis.	3	S

Specialization in Physics

PH3601	Title: Mathematical Physics III	LTPC 3 103	
Version No.	1.0	3 103	
Course	NA 2107 NA 2207		
Prerequisites	MA3107, MA3207		
	The students will learn about the complex numbers and their properties, functions		
	of complex numbers and their properties such as analyticity, poles and residues.		
	The students are expected tolearn the residue theorem and its applications in		
Objectives	evaluating definite integrals, Fourier transform, the inverse Fourier transform,		
	their properties andtheir applications in physical problems. They are also expected to learn the Laplacetransform, the inverse Laplace transforms, their properties and		
	their applications insolving physical problems.		
Expected	The students will be able to use their knowledge of various mathematical tools like		
Outcome	complex analysis, integral transform and will be able to solve a given ODE, PDE.		
<u> </u>		No. of	
Unit No.	Unit Title	hours	
		(per Unit)	
Unit I	Complex Analysis I:	10	
Brief Revision of Co	omplex Numbers and their Graphical Representation. Euler's formula, De Moivre's th	eorem, Roots	
	s. Functions of Complex Variables. Analyticity and Cauchy-Riemann Conditions. Exa	mples of	
analytic functions.			
Unit II	Complex Analysis II:	10	
	poles and branch points, order of singularity, branch cuts. Integration of afunction		
	nequality. Cauchy's Integral formula. Simply andmultiply connected region. Laurent	and Taylor's	
	and Residue Theorem. Application in solving Definite Integrals.		
Unit III	Integral Transforms:	8	
	Fourier Integral theorem. Fourier Transform. Examples. Fourier transform of		
	ve train & other functions. Representation of Dirac delta function as a Fourier Int		
	ives, Inverse Fourier transform, Convolution theorem. Property of Fourier transform		
	mplex conjugation, etc.). Three dimensional Fourier transforms with examples. A	oplication of

PH3640	Title :Mathematical Physics III Lab	LTPC 0021
Version No.	1.0	
Course	Nil	
Prerequisites		
Objectives	The student will be able to develop skills that will help in understanding the behavior of the modeled systems	
Expected	The students should apply their C++/Scilabprogramminglanguage to solve the	
Outcome	following problems:	
	(i) Solution first- and second- order ordinary differential equations with	
	appropriate	
	boundary conditions,	
	(ii) Evaluation of the Gaussian integrals,	
	(iii) Evaluation of a converging infinite series up to a desired accuracy,	
	(iv) Evaluation of the Fourier coefficients of a given periodic function,	
	(v) Plotting the Legendre polynomials and the Bessel functions of different	
	orders and interpretations of the results,	
	(vi) Least square fit of a given data to a graph,	
	List of Experiments	

Scilab/C++ based simulations experiments based on Mathematical Physics problems like

1. Solve differential equations:

$$\frac{dy}{dx} = e^{-x} \text{ with } y = 0 \text{ for } x = 0.$$

$$\frac{dy}{dt} + e^{-x}y = x^2$$

$$\frac{d^2y}{dt^2} + 2\frac{dy}{dt} = -y$$

$$\frac{d^2y}{dt^2} + e^{-t}\frac{dy}{dt} = -y$$

2. Dirac Delta Function

Evaluate:

$$\frac{1}{\sqrt{2\pi a^2}}\int e^{\frac{-(x-2)^2}{2\sigma^2}}(x+3)\,dx\,for\,\sigma=1.,0.1,0.01\,and\,show\,it\,tends\,to\,5.$$

3. Fourier series:

Program to sum $\sum_{n=1}^{\infty}$ 0.2ⁿ,

Evaluate the Fourier coefficients of a given periodic function (square wave).

- 4. Frobenius method and Special functions:
- $\bullet \quad \int_{-1}^{1} P_n(\mu) P_m(\mu) d\mu = \delta_{n,m}$

 $PlotP_n(X)$, $j_v(X)$. Show recursion relation.

- 5. Calculation of error of each observations recorded in experiments done in previous semesters (choose any two).
- 6. Calculate of least square fitting manually without giving weightage to error. Confirmation of least square fitting of data through computer program.
- 7. Evaluation of trigonometric functions e.g.sin $\sin \theta$, Given Bessel's function at N points find its value at an intermediate point. Complex analysis: Integrate $1/(x^2+2)$ numerically and check with computer integration.
- 8. Compute the n^{th} roots of unity for n = 2, $\hat{3}$ and 4.
- 9. Find the square roots of -5 + 12j.
- 10. Integral transform FFT of
- 11. Solve Kirchhoff's current law for any node of any arbitrary circuit using Laplace's transform.
- 12. Solve Kirchhoff's voltage law for any loop of an arbitrary circuit using Laplace's transform.
- 13. Perform circuit analysis of a general LCR circuit using Laplace's transform.

PH3641	Title : Statistical Mechanics Lab	LTPC 0021
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	The students will learn to use computer simulations to study: (a) Planck's Black Body radiation Law and compare with the Wien's Law and Raleigh -Jean's Law in appropriate temperature region. (b) Specific Heat of Solids by comparing, Dulong-Petit, Einstein's & Debye's Lawsand study their temperature dependence	
Expected Outcome	Students shall acquire the skills of solving the thermal physics problems using computational techniques with inferring the right theoretical explanations of results. Use C/C++/Scilab/other numerical simulations for solving the problems based on Statistical Mechanics	
	List of Experiments	

- 1. Computational analysis of the behavior of a collection of particles in a box that satisfy Newtonian mechanics and interact via the Lennard-Jones potential, varying the total number of particles N and the initial conditions:
- a) Study of local number density in the equilibrium state (i) average; (ii) fluctuations
- b) Study of transient behavior of the system (approach to equilibrium)c) Relationship of large N and the arrow of timed) Computation of the velocity distribution of particles for the system & comparison with Maxwell velocity distribution) Computation and study of mean molecular speed and its dependence on particle mass
- f) Computation of fraction of molecules in an ideal gas having speed near the most probable speed
- 2. Computation of the partition function $Z(\beta)$ for examples of systems with a finite number of single particle levels (e.g., 2 level, 3 level, etc.) and a finite number of non-interacting particles N under Maxwell-Boltzmann, Fermi-Dirac and Bose-Einstein statistics:
- a) Study of how $Z(\beta)$, average energy <E>, energy fluctuation ΔE , specific heat at constant volume Cv, depend upon the temperature, total number of particles N and the spectrum of single particle states.
 - b) Ratios of occupation numbers of various states for the systems considered above
- c) Computation of physical quantities at large and small temperature T and comparison of various statistics at large and small temperature T.
 - 3. Plot Planck's law for Black Body radiation and compare it with Raleigh-Jeans Law at highand low temperature
- 4. Plot Specific Heat of Solids (a) Dulong-Petit law, (b) Einstein distribution function, (c) Debyedistribution function for high temperature and low temperature and compare them for thesetwo cases.
 - 5. Plot the following functions with energy at different temperatures
- a) Maxwell-Boltzmann distribution; b) Fermi-Dirac distribution; c) Bose-Einstein distribution

PH3612	Title: Classical Dynamics	LTPC 4 0 0 4
Version No.	1.0	4 0 0 4
Course Prerequisites	PH3106	
Objectives	Students will learn Newtonian, the Lagrangian and the Hamiltonian formulations of classical mechanics and their applications in appropriate physical problems including the special theory of relativity and basics of fluid dynamics, streamline and turbulent flow, Reynolds's number, coefficient of viscosity and Poiseuille's equation.	
Expected Outcome	Students will be able to write Lagrangian for mechanical system in terms of generalised coordinates, derive Euler-Lagrange equation of motion and solve them for simplemechanical systems, write Hamiltonian for mechanical systems and derive and solve Hamilton's equation of motion for simple mechanical systems. Additionally they will be able to develop the basic concepts of special theory of relativity and its applications to dynamical systems of particles and understand the basic concepts of fluid dynamics and its applications to Simpleproblems in liquid flow.	
Unit No.	Unit Title	No. of hours
Unit I	Classical Mechanics of Point Particles	(per Unit) 8
	n Mechanics; Application tothe motion of a charge particle in external electric and	ŭ
magneticfields. Gen equations, one-dimen	electric field, magnetic field- gyroradius and gyrofrequency, motion in cros eralized coordinates and velocities, Hamilton's principle, Lagrangian and the asional examples of the Euler-Lagrange equations- onedimensional.	Euler-Lagrange
Unit II	Simple Harmonic Oscillations and Applications:	8
oscillators Canonical oscillator, solution o	Oscillations and falling body in uniform gravity; applications to simple systems momenta & Hamiltonian. Hamilton's equations of motion. Applications: Hamiltonian of Hamilton's equation for SimpleHarmonic Oscillations; particle in a central for lar momentum and energy.	an for a harmonic
Unit III	Small Amplitude Oscillations:	8
: Minima of potenti small amplitude osci in a linear fashion to	al energy and points of stable equilibrium, expansion of the potential energy aroulations about the minimum, normal modes of oscillations example of N identical n (N-1) - identical springs.	nasses connected
Unit IV	Special Theory of Relativity:	18
and world lines. Spa like and light-like. For relation. Doppler effort	Theory of Relativity. Lorentz Transformations. Minkowski space. The invariant in cetimediagrams. Time -dilation, length contraction and twin paradox. Four-vectors our-velocity and acceleration. Metric and alternating tensors. Fourmomentum elect from a four-vector perspective. e. Conservation of four-momentum. Relativistic kinematics. Application to two-body.	: space-like,time- nergy-momentum
Unit V	Fluid Dynamics:	8
lined motion, lamina	P in a fluid, an element of fluid and its velocity, continuity equation and mass constr flow, Poiseuille's equation for flow of a liquid through a pipe, Navier-Stokes equation, Reynolds number.

PH3613	Title: Physics of Earth	LTPC 4004
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	The student will learn the origin of Universe, Earth, its satellite Moon and in general evolution of present day Universe. Additionally they will learn modern global seismology as a probe of the Earth's internal structure, the origin of magnetic field, Geodynamics of earthquakes and the description of seismic sources Climate and various roles played by water cycle, carbon cycle, nitrogen cycles to maintain steady state of earth shall be explored.	
Expected Outcome	The student will have the knowledge of the place of Earth in this Universe and its formation, structure and its evolution shall enable the student to appreciate the reasons for keeping Earth 'SAFE'	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	The Earth and the Universe and Structure	16

Earth and Universe

- (a) Origin of universe, creation of elements and earth. A Holistic understanding of our dynamic planet through Astronomy, Geology, Meteorology and Oceanography. Introduction tovarious branches of Earth Sciences.
- (b) General characteristics and origin of the Universe. The Milky Way galaxy, solar system, Earth's orbit and spin, the Moon's orbit and spin. The terrestrial and Jovian planets. Meteorites & Asteroids. Earth in the Solar system, origin, size, shape, mass, density, rotational and revolution parameters and its age.
- (c) Energy and particle fluxes incident on the Earth.
- (d) The Cosmic Microwave Background.

Structure

- (a) The Solid Earth: Mass, dimensions, shape and topography, internal structure, magnetic field, geothermal energy. How do we learn about Earth's interior?
- (b) The Hydrosphere: The oceans, their extent, depth, volume, chemical composition. Riversystems.
- (c) The Atmosphere: variation of temperature, density and composition with altitude, clouds.
- (d) The Cryo-sphere: Polar caps and ice sheets. Mountain glaciers.
- (e) The Biosphere: Plants and animals. Chemical composition, mass. Marine and landorganisms.

Unit II	Dynamical Processes I	8
(a) The Solid Earth:	Origin of the magnetic field. Source of geothermal energy. Convection in Earth's cor	e and production
	of its magnetic field. Mechanical layering of the Earth.	

Introduction to geophysical methods of earth investigations. Concept of plate tectonics; seafloorspreading and continental drift. Geodynamic elements of Earth: Mid Oceanic Ridges, trenches, transform faults and island arcs. Origin of oceans, continents, mountains and rift valleys. Earthquake and earthquake belts. Volcanoes: types products and distribution.

(b) The Hydrosphere: Ocean circulations. Oceanic current system and effect of coriolisforces. Concepts of eustasy, tend – air-sea interaction; wave erosion and beach processes. Tides. Tsunamis.

Unit III Dynamical Processes II: Atmosphere and Biosphere

The Atmosphere: Atmospheric circulation. Weather and climatic changes. Earth's heatbudget. Cyclones.

- Earth's temperature and greenhouse effect.
- Paleo climate and recent climate changes. ii.
- The Indian monsoon system.

Biosphere: Water cycle, Carbon cycle, Nitrogen cycle, Phosphorous cycle. The role of cyclesin maintaining a steady state. **Evolution**

Nature of stratigraphic records, Standard stratigraphic time scale and introduction to the concept tof time in geological studies. Introduction to geochronological methods in their application ingeological studies. History of development in concepts of uniformitarianism, catastrophismandneptunism. Law of superposition and faunal succession. Introduction to the geology and geomorphology of Indian subcontinent.

- 1. Time line of major geological and biological events.
- 2. Origin of life on Earth.
- 3. Role of the biosphere in shaping the environment.

4. Future of evolutio	n of the Earth and solar system: Death of the Earth.	
Unit V	Disturbing the Earth – Contemporary dilemmas	3
(a) Human population		
	ben house gas emissions, climate change, air pollution.	
(c) Hydrosphere: Fre		
	nical effluents, nuclear waste.	
	versity loss. Deforestation. Robustness and fragility of ecosystems.

PH3614	Title: Applied Optics	LTPC 4004
Version No.	1.0	
Course Prerequisites	PH3208	
Objectives	Student will learn optical phenomena and technology of Lasers, its characteristics, types of Lasers, and its applications in developing LED, Holography. Additionally they will learn about Photonics and Fibre optics.	
Expected Outcome	The students will be able to identify and use lasers and detectors, Holography, work with Optical fibres and their applications as well some advanced techniques in material characterization.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Sources and Detectors	9

Lasers, Spontaneous and stimulated emissions, Theory of laser action, Einstein's coefficients, Light amplification, Characterization of laser beam, He-Ne laser, Semiconductor lasers.

Experiments on Lasers:

- a. Determination of the grating radial spacing of the Compact Disc (CD) by reflection using He-Ne or solid state laser.
- b. To find the width of the wire or width of the slit using diffraction pattern obtained by a He-Ne or solid state laser.
- c. To find the polarization angle of laser light using polarizer and analyzer
- d. Thermal expansion of quartz using laser

Experiments on Semiconductor Sources and Detectors:

- a. V-I characteristics of LED
- b. Study the characteristics of solid state laser
- c. Study the characteristics of LDR
- d. Photovoltaic Cell
- e. Characteristics of IR sensor

Unit II	Fourier Optics	7

(ii) Fourier Optics (6 Lectures)

Concept of Spatial frequency filtering, Fourier transforming property of a thin lens

Experiments on Fourier Optics:

a. Fourier optic and image processing

- 1. Optical image addition/subtraction
- 2. Optical image differentiation
- 3. Fourier optical filtering
- 4. Construction of an optical 4f system

b. Fourier Transform Spectroscopy

Fourier Transform Spectroscopy (FTS) is a powerful method for measuring emission and absorption spectra, with wide application in atmospheric remote sensing, NMR spectrometry and forensic science.

Experiment:

To study the interference pattern from a Michelson interferometer as a function of mirrorseparation in the interferometer. The resulting interferogram is the Fourier transform of the power spectrum of the source. Analysis of experimental interferograms allows one to determine the transmission characteristics of several interference filters. Computer simulation can also bedone

Simulation can also bedone.							
Unit III	Holography	6					

(iii) Holography (6 Lectures)

Basic principle and theory: coherence, resolution, Types of holograms, white light reflectionhologram, application of holography in microscopy, interferometry, and character recognition

Experiments on Holography and interferometry:

- 1. Recording and reconstructing holograms
- 2. Constructing a Michelson interferometer or a Fabry Perot interferometer
- 3. Measuring the refractive index of air
- 4. Constructing a Sagnac interferometer
- 5. Constructing a Mach-Zehnder interferometer
- 6. White light Hologram

Unit IV Photonics: 9

(iv) Photonics: Fibre Optics (9 Lectures)

Optical fibres and their properties, Principal of light propagation through a fibre, The numerical aperture, Attenuation in optical fibre and attenuation limit, Single mode and multimode fibres, Fibre optic sensors: Fibre Bragg Grating

Experiments on Photonics: Fibre Optics

- a. To measure the numerical aperture of an optical fibre
- b. To study the variation of the bending loss in a multimode fibre
- c. To determine the mode field diameter (MFD) of fundamental mode in a single-mode fibrebymeasurements of its far field Gaussian pattern
- d. To measure the near field intensity profile of a fibre and study its refractive index profile
- e. To determine the power loss at a splice between two multimode fibre

CY3602	Course Title: Instrumental Methods of Chemical Analysis	LTPC 3104
Version No.	1.0	
Course Prerequisites		
Objectives	To gives basic knowledge on instrumental methods of chemical analysis.	
Expected Outcome	To measure the accuracy of analytical data on the basic of interpretatio	
Unit No.	Unit Name	No. of hours (per Unit)
Unit I	Introduction to spectroscopic methods of analysis	8

Molecular spectroscopy:

Infrared spectroscopy:

Interactions with molecules: absorption and scattering. Means of excitation (light sources), separation of spectrum (wavelength dispersion, time resolution), detection of the signal (heat, differential detection), interpretation of spectrum (qualitative, mixtures, resolution).

UV-Visible/ Near IR – emission, absorption, fluorescence and photoaccoustic. Excitation sources (lasers, time resolution), wavelength dispersion (gratings, prisms, interference filters, laser, placement of sample relative to dispersion, resolution), Detection of signal (photocells, photomultipliers, diode arrays, sensitivity and S/N).

Unit II	Separation Techniques	8
Chromatography: Gas chron	matography, liquid chromatography, supercritical fluids, Importance of	column technology

Chromatography: Gas chromatography, liquid chromatography, supercritical fluids, Importance of column technology (packing, capillaries), Separation based on increasing number of factors (volatility, solubility, interactions with stationary phase, size, electrical field), Detection: simple vs. specific (gas and liquid), Detection as a means of further analysis (use of tags and coupling to IR and MS), Electrophoresis (plates and capillary) and use withDNA analysis.

Unit III	Elemental Analysis	8					
Mass spectrometry (electrical discharges). Atomic spectroscopy: Atomic absorption, Atomic emission, and Atomic							
fluorescence. Excitation and getting sample into gas phase (flames, electrical discharges, plasmas), Wavelength							
separation and resolution (dependence on technique), Detection of radiation(simultaneous/scanning, signal noise),							
Interpretation (errors due to	Interpretation (errors due to molecular and ionicspecies, matrix effects, other interferences)						
Unit IV	NMR Spectroscopy	6					
: Principle, Instrumentation,	: P rinciple, Instrumentation, Factors affecting chemical shift, Spincoupling, Applications.						
Unit V Electroanalytical Method		6					
Potentiometry & Voltammetry , Radiochemical Methods, X-ray analysis and electron spectroscopy (surface analysis)							
Text Books Principles of Instrumental Analysis - 6th Edition by Douglas A. Skoog F. James							

Text Books	Holler, and Stanley Crouch (ISBN 0-495-01201-7)
Reference Books	Instrumental Methods of Analysis, 7th ed, Willard, Merritt, Dean, Settle.W.J. Moore: Physical Chemistry.
Mode of Evaluation

CY3612	Title Diechemister	LTPC					
	Title:Biochemistry	4 0 0 4					
Version No.	1.0						
Course Prerequisites							
Objectives The course aims to provide and advanced understanding of the core principles & topics of biochemistry.							
Expected Outcome	Expected Outcome Explain what biochemistry is about & appreciate its central role in science. Understand the relationship to health & diseases & to medicines						
Unit No.							
Unit I	The Foundations Of Biochemistry	8					
Cellular and chemical fo	undations of life.						
		T					
Unit II	Water	7					
Unique properties, weak fitness of the aqueous en	x interactions in aqueous systems, ionization of water, buffers, water as a vironment	reactant and					
		10					
Unit III	Carbohydrates and Glycobiology						
Monosaccharides - strumutarotation, anomers, of sugars. Formation of heteropolysaccharides, s	ucture of aldoses and ketoses, ring structure of sugars, conformations epimers and enantiomers, structure of biologically important sugar derivative disaccharides, reducing and non-reducing disaccharides. Polysaccharides tructural and storage polysaccharides. Structure and role of proteoglycans, g	es, oxidation - homo- and alycoproteins

CY3613	Title:Research Methodology for Chemistry	LTPC 4004
Version No.	1.0	
Course Prerequisites		
Objectives	The process used to collect information & data for purpose for making decisions. The methodology may include publication research techniques, interview & survey etc	
Expected Outcome	Methodology is the systematic theoritical analysi of the methods applied to a field of study	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Literature Survey	10

Print: Sources of information: Primary, secondary, tertiary sources; Journals: Journal abbreviations, abstracts, current titles, reviews, monographs, dictionaries, text-books, current contents, Introduction to Chemical Abstracts and Beilstein, Subject Index, Substance Index, Author Index, Formula Index, and other Indices with examples.

Digital: Web resources, E-journals, Journal access, TOC alerts, Harticles, Citationindex, Impact factor, H-index, E-consortium, UGC infonet, E-books, Internet discussion groupsand 52 communities, Blogs, Preprint servers, Search engines, Scirus, Google Scholar, ChemIndustry, Wiki- Databases, ChemSpider, Science DirectSciFinder, Scopus. **Information Technology and Library Resources:** The Internet and World Wide Web.

Internet resources for chemistry. Finding and citing published information.

Unit II Methods of Scientific Research and Writing Scientific Papers

8

Reporting practical and project work. Writing literature surveys and reviews. Organizing poster display. Giving an oral presentation. Writing scientific papersjustification for scientific contributions, bibliography, description of methods, conclusions, the need for illustration, style, publications of scientific work. Writing ethics. Avoiding plagiarism.

Unit III Chemical Safety and Ethical Handling of Chemicals 8

Safe working procedure and protective environment, protective apparel, emergencyprocedure and first aid, laboratory ventilation. Safe storage and use of hazardouschemicals, procedure for working with substances that post hazards, flammableor explosive hazards, procedures for working with gases at pressures above or below atmospheric – safe storage and disposal of waste chemicals, recovery, recycling and reuse of laboratory chemicals, procedure for laboratory disposal of explosives, identification, verification and segregation of laboratory waste, disposal of chemicals in the sanitary sewer system, incineration and transportation of hazardous chemicals.

Unit IV Data Analysis 7

The Investigative Approach: Making and Recording Measurements. SI Units and theiruse. Scientific method and design of experiments. Analysis and Presentation of Data: Descriptive statistics. Choosing and using statistical tests. Chemometrics. Analysis of variance (ANOVA), Correlation and regression, Curve fitting, fitting of linear equations, simple linear cases, weighted linear case, analysis of residuals, General polynomial fitting, linearizing transformations, exponential function fit, r and it's a base. Basic aspects of multiple linear regression analysis.

Unit V Electronics 8

Basic fundamentals of electronic circuits and their components used in circuits of common instruments like spectrophotometers, typical circuits involving operational amplifiers forelectrochemical instruments. Elementary aspects of digital electronics.

Specialization in Mathematics

MA3601		T TO D C						
	Title: Partial Differential Equations	LTPC 4204						
Version No.	1.0							
Course Prerequisites	MA3207 , MA3107							
Objectives	To prepare committed and motivated graduates with research attitude, lifelong learning, investigative approach, and multidisciplinary thinking. Graduates will able to identify, formulate and solve engineering							
Expected Outcome								
Unit No.	Unit Title	No. of hours (per Unit)						
Unit I	Introduction of PDE	9						
Linear partial differential eq	uations of first order.Non linear PDE of first order, Charpit's method,	Lagrange's methods.						
Unit II	Classification of PDE	9						
Classification of partial diffe	prential equations of second order and canonical form.							
Unit III	Solution of second order PDE	6						
Linear Homogeneous Partia	I differential equations of n th order with constant coefficients, Rules fo les for finding the Particular Integral, Short method to find out P.I. in I							
Unit IV	Variable separable solution	9						
	mension solution by separation of Variables, Solution of heat equa	-						
Solution of one and two di	mension solution by separation of Variables, Solution of heat equa	-						
Solution of one and two di dimensions by method of seg	mension solution by separation of Variables, Solution of heat equa- paration of variables.	tions in one and two						
Solution of one and two di dimensions by method of seg	mension solution by separation of Variables, Solution of heat equa- paration of variables. Wave equations	tions in one and two						
Solution of one and two di dimensions by method of sepunit V Equation of vibrating string,	mension solution by separation of Variables, Solution of heat equatoration of variables. Wave equations Solution of Wave equations. TynMyint-U and LokenathDebnath, Linear Partial Differential Eq	tions in one and two 7 uation for Scientists Equations: An

MA3602	Title: Complex Analysis	LTPC
Version No.	1.0	4 2 0 4
VEISION INO.	1.0	
Course Prerequisites	MA3306	
Objectives	To impart the knowledge of complex function and complex integration.	
Expected Outcome	Students will be able to describe the analytic function and properties. Students will also able to solve complex integration	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Analytic function	10
	iable, Concepts of limit, Continuity and differentiability of complex in equations (Cartesian and polar form), Harmonic functions, Orthogo	
Unit II	Complex Integration	9
Complex Integration, Line	integral, Cauchy's fundamental theorem, Cauchy's integral formulas.	
Unit III	Power series	8
Method of expansion of a f	unction, Taylor theorem and Laurent theorem.	
Unit IV	Singularities and Residue	7
Zeros and singularities of a theorem.	nalytic function and related theorems, Residues and their determinati	on, Cauchy residue
Unit V	Contour Integration	6
Evaluation of proper and in Text Books	James Ward Brown and Ruel V. Churchill, Complex Variables and (Eighth Edition), McGraw – Hill International Edition, 2009.	Applications
Reference Books	Joseph Bak and Donald J. Newman, <i>Complex analysis</i> (2nd Edition Undergraduate Texts in Mathematics, Springer-Verlag New York, York, 1997.	
Mode of Evaluation	Internal and External Examinations	
Recommendation by Board of Studies on	13-05-2020	
Date of approval by the Academic Council	13-09-2020	

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None (Use , for more than One)
CO1	Students will be able to understand the significance of differentiability for complex functions and be familiar with the Cauchy-Riemann equations.		S
CO2	Students will be able to apply the concept and consequences of analyticity and the Cauchy-Riemann equations and of results on harmonic and entire functions including the fundamental theorem of algebra and use anti derivatives to compute line integrals.		S
CO3	Express complex-differentiable functions as power series. Analyze sequences and series of analytic functions and types of convergence. Apply the theory into application of the power series expansion of analytic functions	l	S
CO4	Students will gain knowledge on functions as Taylor, power and Laurent series, classify singularities and poles, find residues and evaluate complex integrals using the residue theorem.		S
CO5	Students will be able to understand the uses of improper integrals in various situations. Understand the basic methods of complex integration and its application in contour integration		S

Version No.	1.0							
Course Prerequisites	MA3306							
Objectives	To impart the knowledge of the basic requirements for their higher studies.							
Expected Outcome	Learn different ways of solving second order differential equations and familiarized with singular points.	No. of hours						
Unit No.								
Unit I	Statics in space	10						
Unit II	tral axis, Resultant wrench of twowrenches; Motion of a rigid body	9						
Moments and products of ine	ertia of some standard bodies, Momenta ellipsoid, Principal axesand mo	ments of inertia.						
Unit III	Equation of continuity in Coordinates proaches, Material and convective derivatives, Velocity of a fluidat a	8						
surface Unit IV	Equations of motion	6						
Euler's equations of motion	in.							
Unit V	Two dimensional flow	7						
singularities; Image system o	obtential, Basic singularities: Sources, sinks, doublets, complexpotential of a simple source and a simpledoublet with regard to a line and a circle rdinates,;Bernoulli's equation, Impulsive motion							
Text Books	1. Michel Rieutord (2015). Fluid Dynamics An Introduction. Spring	ger.						
Reference Books 1. A. S. Ramsay (1960). A Treatise on Hydromechanics, Part-II Hydrodynamics. G. Bell& Sons. 2. F. Chorlton (1967). A Textbook of Fluid Dynamics. CBS Publishers.								
Mode of Evaluation	Internal and External Examinations							
Recommendation by Board of Studies on	13-05-2020							
Date of approval by the Academic Council	13-09-2020							

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None (Use , for more than One)
CO1	Students will be able to understand the reduction to a force and a couple, Equilibrium of a system of particles	2	S
CO2	Students will be able to understand the concepts of Momentum ellipsoid, Principal axes and moments of inertia	3	S
CO3	Students will gain complete knowledge of Material and convective derivatives, Velocity of a fluid at a point, Equation of continuity in Cartesian, cylindrical polar and spherical polar coordinates	2	S
CO4	Students will be able to understand Cartesian coordinates,; Bernoulli's equation, Impulsive motion.	2	S
CO5	Students will be able to understand Milne Thomson circle theorem. Cartesian coordinates,; Bernoulli's equation, Impulsive motion	3	S

		LTPC
MA3613	Title: Number Theory	4004
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	Demonstrate knowledge and understanding of topics including, divisibility, prime numbers, congruence, quadratic reciprocity, Diophantine equations.	
Expected Outcome	Learn methods and techniques used in number theory.	
Unit No.	Unit Title	No. of hours (Per Unit)
Unit I	Division algorithm	8
The division algorithm, The atheorem of arithmetic.	\gcd , the Euclidean algorithm , Diophantine equations $ax + by = c$, the f	undamental
Unit II	Theory of congruencies binary and decimal representations of integers, linear congruence and	8
theorem , Fermat's theorem , V Unit III Number theoretic function , T phi function , properties of ph	Number theoretic function au and sigma function, the Mobius inversion formula, the greatest integer	8 er function , Euler's

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None (Use , for more than One)
CO1	Students will learn about the Euclidean algorithm ,Diophantine equations.	2	S
CO2	Students will be able to understand the theory of congruencies, binary and decimal representations of integers, linear congruence and Chinese remainder theorem, Fermat's theorem, Wilson's theorem.	3	S
CO3	Students Will learn about Tau and sigma function , the Mobius inversion formula.	3	S
CO4	Students will be able to know the concept of order of an integer molulon , primitive roots for primes , composite numbers.	2	S
CO5	Students learn concept of the Dirichlet product.	3	S

MA3614	Title: The Theory of Rings	LTP C 4004
Version No.	1.0	
Course Prerequisites	MA3407	
Objectives	The objectives of this course are to give some basic definitions, state several fundamental properties and a few examples of rings.	
Expected Outcome	The knowledge obtained from study of advanced ring theory motivates to do further research work in the theory of rings.	
Unit No.	Unit Title	No. of hours (Per Unit)
Unit I	Introduction of Ring	9
Ring definition and example	s, sub rings, Imbedding of rings, Direct and discrete direct sum of rings, Pr	oduct of rings.
Unit II	Ideals	7
Ideals, product of two Ideals	, prime ideals , maximal ideals , principal ideal , quotient ring.	
Unit III	Polynomials Ring	8
Polynomials rings Euclidean	theorem, factor theorem, irreducible polynomials.	
Unit IV	Field Extension	9
Introduction of Extension Fi	eld, Algebraic Extension, Roots of polynomials.	
Unit V	Splitting Field	7
Splitting fields and construct	tion by edge and compass.	
Text Books	N. H. McCoy: The Theory of Rings.	
Reference Books	Anderson and Fuller: Rings and Categories of Modules. 3. I. S. Luthar a Algebra Volume 2: Rings.	nd I. B. S. Passi:
Mode of Evaluation	Internal and External Examinations	
Recommendation by Board of Studies on	13-05-2020	
Date of approval by the Academic Council	13-09-2020	

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Enp)/ None (Use , for more than One)
CO1	Students will learn about Ring, sub rings embedding of rings and some properties of rings and apply these properties in problem solving.	2	S
CO2	Students will be able to understand the definition of Ideals, product of two ideals, prime ideals, maximal ideals, principle ideals and about quotient ring.	3	S
CO3	Students Will learn about definition and properties of Polynomial rings, euclidean theorem , factor theorem , irreducible polynomials	2	S
CO4	Students will be able to know the concept of extension field, algebraic extension, Roots of polynomial and apply this conceptin problem solving.	2	Enp
CO5	Students learn concept of Splitting fields and some theorems on itand learn about constructible number, construction by edge and compass	3	None
